Thread: [You're Still Doomed, Even if You're Immortal](#)

Allelujah - April 5, 2019, 7:11 am

One day the sun will enlarge and swallow the earth.

<https://amp.usatoday.com/amp/3368994002>

RIP :(

Sir - April 5, 2019, 7:21 am

People of the future:

"Lmao the sun won't engulf the Earth during my lifetime bruh YEET!
Yo does the sun look like it's getting bigger? "

Riizq - April 5, 2019, 9:54 am

Actually the sun is losing it's energy. But it's going to be a million of years from now. It will turn into a black hole I think. If my memory serves right from the huge ass encyclopedia that I read ages ago

And you don't have to worry about that. Like seriously. You will be living 70-90years tops. You have other things to worry about. Like finding your remote that's hidden under your sofa. Or trying to find a free WiFi spot cause you have an expensive data plan. Haha

Cocaine - April 5, 2019, 9:56 am

We will destroy our own world in our lifetimes never mind then. lol plebs.

luke - April 5, 2019, 11:28 am

If you were immortal you'd just float about in space for a while.

Celibate - April 5, 2019, 11:39 am

What if I told you there is no such thing as "space" and that were all trapped inside a nonrotating firmament. Don't worry though, someone or they will pull the plug and end this simulation eventually.

[NASA](#) admits a flat earth themselves

NERO - April 5, 2019, 11:40 am

I wish i could blow up and eat the earth...

"for a while"

couple hunred billion years

WRX - April 5, 2019, 12:04 pm

couple hundred billion years

That's assuming you don't hit a planet you're passing or a spaceship. Like Thor in the avengers.

Our sun isn't nearly large enough to become a black hole. Sun's core would collapse and the extra heat this generates would cause outer layers to expand, then red giant phase would begin, but in the end it will become a white dwarf.

StormShadow23 - April 5, 2019, 12:19 pm

Any sun will kill me if i killmyself be4, i even prefer dying of LIGMA

Riizq - April 5, 2019, 12:23 pm

Yes white dwarfs.

That rings a bell.

I did read about this.

Science is so interesting to think about.

Like damn son, the universe is expanding And there's like a billion galaxies with a billion stars.

And the Andromeda galaxy and our milky way galaxy will meet..in the next 100 million years .omgf want to see that happening!!!!!!

Ikr. Between 200 and 400 billions stars and a 100 billion planets, 1 billion of them are earth like planets and that's only in the Milky way! I want to be immortal so I could witness new technologies that would take us outside our solar system, but even the speed of light wouldn't be good enough...

vagabond - April 5, 2019, 5:48 pm

lol idiot we will live on mars by then

Riizq - April 5, 2019, 5:52 pm

If there's no sun, you would basically be frozen to death. And we'll you need sun cause you're Superman. No sun = no superpowers haha
