Thread: [I rebooted my remote PC, cant connect via teamviewer or rdp](#)

Takehito Morokuzu - April 5, 2019, 12:54 pm

hi,

I rebooted my pc at home because my emulator crashed and I couldn't open a remote task manager.

when It rebooted, it appears in teamviewer but I can't connect. when I try rdp it just says connecting and the closes. no error messages on either.

anyone know how I can fix this? I'm not at my pc so I can't manually reboot or login

Mr. Robot - April 5, 2019, 1:33 pm

Whats your home PC public IP lemme hit that box up.

xcheckmate23 - April 5, 2019, 2:16 pm

What is your emulator for>? Is it a virtual PC?

Takehito Morokuzu - April 5, 2019, 2:19 pm

I was game streaming using Parsec, using the RPCS3 emulator (PlayStation 3 emulator) it was working perfectly, then the emulator got stuck and I couldn't close it, so I connected via teamviewer and rebooted the pc. it appears in my teamviewer list but it infinitely connects, same with Microsoft RDP which I have setup. no error messages on either. strange as I rebooted earlier as my emulator crashed again and I was able to reconnect just fine.

Maybe try turning off windows firewall?

Takehito Morokuzu - April 5, 2019, 2:22 pm

It's definitely accessible over the Internet. it's just getting stuck on connecting. teamviewer does not require a firewall rule either.

even so I do not have physical access to my pc right now, which is why I was using remote desktop in the first place.

That is very strange. And obviously the pc has been restarted...

Yeah, not sure whats up with it, bur it's annoying because the PC I am using right now runs the emulator at like 5 frames per second and has little storage to use. ?

If you can fix it sure. I think a reboot is all that is needed

Mr. Robot - April 5, 2019, 2:37 pm

I said send me the IP goddamit.

Fine i'll find it myself.

Vanilla - April 5, 2019, 2:46 pm

It's windows updates if you haven't figured it out already.

?

I don't trust you, like what will you do? I'm not sending my ip without knowing what you will do.

What is? it's been like this for hours, it's in my teamviewer list but I can't connect. No error message.

Well i'll check to see if your network is vulnerable, if not I will down your network and let it come back online to see if a reconnect will fix it - from there I will try login to your teamviewer account and see if I can force a restart of the service.
