Thread: [VPS allowing RAT use ?](#)

Clovis V - April 6, 2019, 2:17 am

Hey,

After seeing a few of my VPS suspended because of Spamhaus, I'm looking for a way to use my RAT (I'm using Quasar) on a VPS without being banned every week..

Either a hosting service that will really ignore Spamhaus and allow the use of a RAT, or a different solution, or maybe a way to hide the use of a RAT..

Anyway, if you have any experience/idea, let me know ;)

Thanks

Fisher - April 6, 2019, 2:20 am

Just use it on custom OS if they support it and you will never be suspended. ?

Quasar is running on Windows, I should get a custom Windows ? I don't get it, why should it avoid me to be suspended ?

Buy a vpn, and use that on the VPS.

Sure it will work ? Have you ever experiment that ?

I've never been banned from a VPS so not 100%, but since you are hosting it through the vpn and not vps you should be fine. I recommend using dollarVPN

I rather use nvpn.net then dollarVPN.

Use whatever you want. But I have personally used dollarVPN and got better speeds than nvpn.

Speaking from personal experience. I've been running 2 RAT VPSes on [censored] servers for a week or so now.

No issues so far. 5\$/month for 1 VPS so it's dirt cheap.

Sidenote: Use a Domain Name instead of a direct IP so if your VPS gets banned you can just redirect your clients to another server!

I do use a domain, that's not the problem.

I tried Hostbubble, it worked for a few weeks before being suspended.

Then I tried Blazinhositing, but was suspended after just a few days.

Will buy a vpn, I think that the best solution

If you decide on DollarVPN and need support, don't hesitate to give me a holler.

How did this go mate?

ping010101 - May 13, 2019, 1:58 pm

i think you better use a vps from some third world countries

Partycrasher - May 14, 2019, 12:44 am

infiumhost ;)

is god for rats ;) & cheap

SIM-4199941 - May 20, 2019, 8:13 pm

Use a Vps with No matter what policy, or a offshore vps; DollarVPN is good.

Clovis V - June 9, 2019, 2:23 am

Everything was working fine for a few weeks until my DollarVPN has been banned..

I just started using StarkVPS yesterday. So far it's been perfectly good for me & I'm on the lowest plan.

Yeah don't use this shit VPN they are leaking logs as well. Better use nvpn.net they have provided them self via couple police cases that they really don't keep any logs.

3xploit - June 9, 2019, 4:43 am

Take a look at this hosting provider:

<https://hackforums.net/showthread.php?tid=5843098>

?

Anyway I could talk to you? I just got back at Ratting and would like to talk to someone active.
