I'm still learning contracts; you should be able to check out using BTC. Please let me know if you have any issues.

El Chapo Guzman - April 8, 2019, 11:58 pm

I purchased the cheat. I am not very impressed with it as its External and does not have visual checks. You could be trying to shoot at someone right in front of you but it locks on to someone through the wall instead. There is a delay in which the aimbot detects the target.

EDIT: Also I wouldn't recommend to someone trying to look legit, its a bit snappy even with smoothing.

DEXAiM - April 9, 2019, 12:32 am

Just FYI, the above review is outdated - we have completely rebuilt our cheat and now provide an internal solution. This review was for our cheat "DAWN" which is still available, yet this thread is now selling our internal cheat called "DELTA."

Appreciate the feedback. We're working with one of our developers to provide an internal cheat that will be more geared towards what you're looking for. This cheat is certainly the safest on the market right now - but as with any external solution, there are drawbacks.

Personally, I've gotten used to the aim lock - I have no issue pulling over 20+ kills a game.

As for the smoothing: try sliding the smooth slider higher. It is actually pretty smooth IMO.

ierc - April 9, 2019, 6:13 pm

Pretty descent for being an external cheat. Dropped a 20 bomb my first game. Thanks my dude!

We sell 3 different cheats. The one advertised on this thread (DAWN) is about \$13.50/day (PayPal) or about \$9.50/day crypto.

I can 100% for dexa.im. The hack is amazing and the price can't be beat.

Ive bought it twice. Each time a day because I work 13 hours a day, I normally only use it on the weekend if im free.

Aimbot is amazing.

pSilent is also amazing to make it look legit when you have a small FOV.

No recoil. 10/10

ESP. 10/10 Shows you everything. You can switch from text item ESP. Or picture item ESP.

Havent been banned yet.

Most people like to try the cheat out for a day. Some of our customers don't play Apex a lot, so they can't justify buying a one month key - they buy day keys when they want. Gives people more flexibility

Reccomendation for ALL: DO NOT BUY THIS.

Already made this loud and clear and kinda was pissed in Discord, got instantly banned just like I was banned from IZI.

Spent \$100 for a month, used it only for a day or 2 of that month (at full-working potential), instantly got banned.

Couldn't fix settings because this cheat menu wasn't working at all, using f10, delete, insert or home.

Their support is garbage, they reply once or twice every 24 hours and end up not helping even in severe situations.

Worst cheat I've ever bought in my life next to IZI, Just my honest review.

If the owner tries to make a counter-claim against this, I'll be glad to show proof that I'm HWID banned thanks to your cheat ?

Just gonna leave this here as well, there's way better cheats out there with more features, for way cheaper.

Can you DM me your order ID? I don't have an active contract with you so everything you're saying is moot.

Second, there is no real way to show "proof" that you are HWID banned other than a screenshot of a ban message, so I'm not entirely sure what you mean by this.

Additionally, in any situation where I or my team cannot resolve issues in a timely manner, I've given out additional time on licenses without hesitation. So, you either have the wrong cheat or did not make any attempt to request to I support from us.

Our prices are very competitive for this market, considering the complexity of our Apex DELTA cheat. We do not sell low quality "\$5/month" cheats - I would not personally trust a \$5/mo EAC cheat.

Yes, works on S3

514blizzy - October 6, 2019, 5:09 pm

Is it instant activation when I purchase or do I need to wait for confirmation from you?

Instant activation. Everything is automated

514blizzy - October 6, 2019, 5:12 pm

Final question, even though I should have asked them all at once, oh well! Do you need a USB to run it? Thanks for quick reply

No, a USB is not required

514blizzy - October 6, 2019, 5:39 pm

Purchased and everything is working already. Very smooth process for anyone interested. Will post later with a review but I'm mainly planning on using a very very small fov aimbot if none and just esp.

It says the cheat is down? Also i've heard you guys get detected a lot. When was the last time you got detected and did you survive the banwave recently?

I bought the 1 Day License and played Apex. Never played it before and never used any other cheats. 2 Days later i got banned.

The ban was on tuesday

Cheat updated for latest patch and UD'd again

BarnieSanders - December 28, 2019, 3:27 pm

Actually, a good cheat haha I play pretty blatant as I don't care if I get banned from this game. But yeah this cheat is awesome +vouch

Interested in the rust cheat aswell, but i am hwid banned in that game so does the spoofer work well?

Hi, we do not provide any support over DM or via HF in general. If you need support, please open a support ticket on our website as we typically do not see these responses in a timely manner. Also, this topic is for Apex, not Call of Duty.
