Thread: [Python urllib HELP](#)

N0TR3DAMUS - April 13, 2019, 10:13 am

Hi

How to add python urllib click web button?

Thanks any help!

loomski - April 13, 2019, 11:47 am

Look up

"Python urllib POST example"

"Python urllib POST example"

Thanks! ?

(Apr 13, 2019 11:47 AM)loomski Wrote: [\[CITE\]](#) Look up

"Python urllib POST example"

error: SyntaxError: invalid syntax

My code:

```
import urllib
```

```
f = raw_input("Add your mail: ")
```

```
b = raw_input("Add password: ")
```

```
x = raw_input("Target mail: ")
```

```
c = raw_input("Subject: ")
```

```
url = 'gmailurl'
```

```
data=urllib.urlencode{'Email or Phone':f 'submit': 'Next'"Enter your password':b 'submit':'Next'}
```

```
op = urllib.urlopen('gmailurl',data)
```

I would recommend Requests against urllib. Also from your code, it would need way more data.

Check this out: <https://hackforums.net/showthread.php?tid=5952317>

error: SyntaxError: invalid syntax
My code:

```
import urllib
```

```
f = raw_input("Add your mail: ")
b = raw_input("Add password: ")
x = raw_input("Target mail: ")
c = raw_input("Subject: ")
url = 'gmailurl'
data=urllib.urlencode{'Email or Phone':f 'submit': 'Next'Enter your password':b 'submit': 'Next'}
op = urllib.urlopen('gmailurl',data)
I have no idea what you're trying to achieve though.
```

How to add python urllib click web button?

Thanks any help!

If your sending emails, use.smtplib:

<https://stackabuse.com/how-to-send-emails-with-gmail-using-python/>

Dont even think of using it to spamming though, it'll be pointless

How to add python urllib click web button?

Thanks any help!

Clicking a button would be difficult with url lib or requests,. Ofcourse you can see what HTTP request is send after you click the button yourself and craft that request in your script. Or you could use selenium to interact with the webpage.

demarco - May 17, 2019, 7:58 pm

In a lot of cases websites have javascript to load the buttons. So If you just looked at the html you grabbed with urllib, you might not even find the button in there at all. You need something like selenium to load the javascript then grab the html. If it's just clicking on something, dm the website and what button it is and I can write you up something in 5-10 lines.
