Is this source code mate

Because it has lot of features and price is high

And another question is

This hosting on website or else application

As you see it has a lot of features and, to be honest the price is cheap compared with the features,

this price is for the build not the source, and yes it can be hosted in any host like shared host/VPS.

Why does it have the same background as Azorults? and the menu buttons the same? the same descriptions of the data that Azorults collects?

Do you have any sample where you see what your code is?

I am a verified seller on exploit.in something you can't even sell.

If you own you will not have any problems in which a reversing is done to verify that you are the true owner

For the rest you are just behaving like a child, because you don't want to give real proof that you are the developer.

You will not deceive me and because you put me negative you will not make me change my mind. I have many suspicions of you and you give me no guarantee.

My posts are not negative, they are optimistic and with a common sense, I don't have any negative

in exploit.in to say that. You are not even verified on exploit.in so stop saying shit and do not scam people, I remind you that you have comments from people who owe them money because you have not given them the service.

Correct your mistakes and then we can talk, while I don't talk to scammers I just disassemble them.

Is this like a form grabber or what?

Transporter007 - November 9, 2019, 1:33 am

In 175\$ you will give with panel and bin will fud or non fud ? If non fud than which crypter will be compatible with ?

Dark-Bot - November 9, 2019, 3:16 am

more than half a month, I sent 120 dollars but didn't receive anything, texted on the jb didn't reply

Directly opens a dispute in the marketing section. Do not wait any longer, that behavior as a seller is not correct. ?

RCE - November 9, 2019, 4:16 am

@Dark-Bot , You have not messaged me in jabber, I don't see any message from you yesterday or today ?

It will be panel and bin , if you want to make it FUD you can use any good crypter support native files.

Update:

the sale is still open , feel free to message .

0x414243ffffff - December 17, 2019, 8:52 am

if it's in C/ASM then it won't be hard to start procmon and detect it

no stealer can avoid detection i belive if it does,then it does not have features which detect AV ,AV can easily detect this after having your stub decrypted its pretty useless to have it avoid static analysis when it can be easily caught in dynamic analysis,even better do yourself a favor and write your shits then you can easily imagine where trashes come from

Big Update!

+the logs delivery is now in telegram so u don't need any host for the panel.

+Alot of bugs has been fixed.

+Now it recovers important files from the disk.

+Added OperaGX gaming browser.

+More recoveries functions have been added.

+The speed of sending has been highly improved.

+Always in C++ without any dependencies :)

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
