Thread: [can you teach me how to make money RAtIng \(please read\)](#)

amjadhasan - April 16, 2019, 5:59 am

Probably just like you, I started RAtIng for an interest in hacking and to learn and expand with what I have.

I know a lot of you are very well experienced than I am and that's why I ask for any of your help that you can offer. and maybe you can relate to this but, if were or still are, I'm struggling to find money making methods and right now I have RATs and want to use what I know to my advantage.

I don't want to get money from them in such ways as: "Stealing accounts, Blackmail, etc.." I'm interested in methods that are more secret and doesn't cost the person I'm hacking any trouble that I wouldn't want myself. For example, things such as planting something on their computer that makes me earn money/can even be ad revenue related, etc...

I know RAtIng isn't a white hat hacker type of thing but I want to try to get paid off of them without doing anything harmful to them and I hope you can try to respect my way of thinking.

Please If you know a way please help me, from a person who really needs it to another. Thank you, you can PM if you want to tell me your method privately between us and I would respect that and I'll promise that It would never be shared, I can guarantee it.

Don't hesitate to talk to me and If you need anything from me I'll make sure to respond.

Thanks! ?

Just made an account and sent you a message.

Anyone else has something?

galrov - April 16, 2019, 9:27 am

you arent going to find a way to make money doing this white hat im sorry

Takehito Morokuzu - April 16, 2019, 9:29 am

Use silent adware. for example, make a website with ads on and make the rat show a silent Web browser window that loads your website. that way the user won't even notice the adware and you will make a small amount of money

thank u for the honesty, yo that guy up in the last comment I think legit tried to hack me he went in cmd and typed something then left

I have never seen such an idiot of a scammer in my life but then again its on my laptop so its not my main comp idk what he did tho.

Thank you for the help I appreciate it. Yeah, I know a simple way to open internet explorer silently even on startup so that it will always be saved on their computers
just what's left is a site and I'm going to get into that. Thank u for the help again :)

I think you just found a multi-accounter, there was someone a few days ago who spammed their Telegram and ran a command which gave them access to a hidden desktop on your computer. This means they can remotely control your computer with a hidden desktop that you cant see, and they can access all the website you're logged into, i recommend you post in the White Hat Malware Removal section and once clean reset all of your passwords.

Your best bet would be to use a miner as this would make you loads of money in no time.

James Burnham - April 16, 2019, 9:44 pm

Maybe offer a remote control set up to businesses that want to remotely control every computer they have. Maybe to make sure that no employees are wasting their time or maybe to cut down the expense of security cameras. There are situations where people are legally allowed to remotely control computers. Maybe these people can be your clients.

This guy is onto something if you could do it for a relatively cheap price like less than hiring an intern or something you can automate most of it honestly. Companies spend a good bit at some level on remote administration

Ouch why in the world would you just let people you met get onto your computer? Either way it's what that yoappened just make sure you are not infected. Being a WhiteHat you can actually make some money as the poster Burnham mentioned monitoring employees, small business may go for it, I lately have seen quite a few threads by business types wanting to monitor employees. Look at current accepted solutions you are looking for 270 - 360 per install (per tech). But more over as a WhiteHat you can make decent money with bug bounties even pentesting or just vulnerability assessments. I am not sure where your skills are right now but if the skill sets are not quite there yet then consider investing some money into getting training for yourself.

Scitie - April 17, 2019, 5:36 am

it's easy, i can get 1k \$ per month if you are good in rating, contact me: live:shmxxd

Imfao what

i want to hack people and make money, but not in a blackhat or illegal way, also has to be fast, also has to be cashed out in these specific ways, also has to work in this third world country, also has to work with the 3 bots I have.

you guys are clownin rn

I suggest that if you want to make money with your knowledge of controlling computers, to offer a service to employers. Invisible browsers and fake ad traffic is not really a whitehat method, it classifies as ad fraud.
