Thread: [New method for iCloud Activation On iPhone / iPad / iPod Touch In 2019\(pre-11\) bypass](#)

SamyPammy - April 18, 2019, 2:25 pm

Hi guys, I follow a good website which keeps me updated on the iOS jailbreaks/bypasses.

It seems as though one person by the name of SoNick_14 is able to bypass the iCloud activation on certain devices for only \$12 USD. Here's are the devices/version/services he can do:

- iOS 10-10.2.1 for All devices
 - iOS 6-9.3.5 for iPad 2,4 and lower versions
 - iOS 6-7.1.2 for All devices
 - MDM Bypass iOS 11&lower for All devices
 - Carrier Bypass iOS10.3.3 & lower versions
- Price: \$12USD

Here's are some stipulations if you're going to use the service which will affect the usage of the iDevice:

Quote:Please do keep in mind that this will not work with lost devices! Play fair!

Although the method is a full bypass, it still has some caveats. See, a bypassed device (being it, for example, an iPhone 6S running iOS 10.2.1) would work fine and you can install applications and even place calls through internet apps, but the SIM card will never be recognized. You will not be able to use the SIM card to place calls, connect to cellular data or receive/send SMS messages. Another limitation is that iTunes would not be able to backup the device.

The only "official" method to remove icloud activation completely from a device and still have all the functionality of it is by either:

A) Paying to someone that has access to apple's GSX server so that they can remove your device's serial number from the icloud server blacklist (prices and elegibility may vary depending on the device's IMEI status, or if its stolen/lost or under a financing plan)

Price estimate: \$150+

B) Doing the hardware method which requires someone with SMD soldering equipment and skills, R/W tools for reprogramming the serial number into the NAND IC chip & baseband IC

Price estimate: A lot \$\$\$

Personally, I've used the GSX server and it works, i paid \$150 for an iPhone 8+. I also remove icloud from ipads only with the hardware method. Any other method is a semi bypass and may affect some functionalities of the device.
