Thread: [Could someone recommend me a good Udemy \(warez disallowed\) course to learn web hacking prerequisites?](#)

raggaescience - April 20, 2019, 6:52 pm

The reason I ask is there are 33 hour courses on Udemy (warez disallowed) which shouldn't be necessary. But a three hour web dev course typically doesn't look like it will give me the necessary knowledge.

I want to be able to build a simple full-stack web app and know everything needed to start web hacking. I'm not looking for a web hacking course. I'm looking for a good course to learn web dev. Then afterwards I already know which web hacking course I am gonna take.

Could someone recommend me a good Udemy (warez disallowed) course? I'm having trouble selecting the right one.

I found this one

[https://www.Udemy \(warez disallowed\).com/share/100YzyB0cTcl4=](https://www.Udemy(warez%20disallowed).com/share/100YzyB0cTcl4=/)

Would you say that's too long or appropriate?

Thanks.

Sincerely,

Raggaescience

You won't find a course that will teach you both full stack development and webhacking at the same time.

I recommend you stick to one at a time as these are both very difficult to learn.

Here: [https://www.Udemy \(warez disallowed\).com/course/learn-website-hacking-penetration-testing-from-scratch/](https://www.Udemy(warez%20disallowed).com/course/learn-website-hacking-penetration-testing-from-scratch/)

Is a good one for webhacking. PM me if you'd like help with anything in particular.

I don't want to start with web hacking. I want to start with web development so I get the prerequisites. I already know which web hacking course I want (actually I already wanted the one you recommended).

I'm looking for a web development course that includes enough knowledge to make a full stack web app that includes all the web development concepts necessary before web hacking. Then I want to build a full stack web app. Then I want to buy a separate hacking course.

But I want a web dev course that's not too short and not too long.

You'll want to learn the basics of HTML, Javascript, SQL and have an understanding of HTTP to begin webhacking. those are the only prereqs for webhacking. I'd recommend the courses on code academy. The java-script one will teach you how to build basic apps so you're good there. and its free.

Will I learn to build full stack there? I don't think core avademy is the ideal way unless I can make a full stack web app afterwards immediately and know the full networking behind the web app.

Honestly, I used to be on Code Academy and its not the best place to learn advanced stuff.
