Thread: [Would like some help Setting up Rat with Vpn and DDNS](#)

DraculavXv - April 23, 2019, 1:49 am

Hi,

So i recently got back into this and I'm really struggling to setup my RAT with a VPN and DDNS. I use AIRVPN and opened a port and created a DDNS.

Now when i try to use the DDNS with the rat (as host to connect to for bots) it just doesn't work. I checked if my port was open and it was, i tried setting up a rat with my own network setting and it works fine.

Just struggling with the vpn connected to the ddns.

My vpn automatically connects to the vpn so thats probaly not the issue.

Would really appreciate some help if u got any spare time!

Thanks in advance :)

try simple , buy a china windows vps

Nosfir - April 24, 2019, 3:57 am

I never had problems with DDnS are you sure the rat is compatible with a ddns

Have you setup this? https://airvpn.org/faq/port_forwarding/
