Thread: [eliamenisch-admincp-finder - multithreaded & very fast](#)

dearux - April 23, 2019, 6:49 am

Hello. I have written a very fast multithreaded OpenSource admincp-finder!

HF doesnt allow me to post Links because i dont have 50 posts, thats why i use \$GITHUB as the github-url and \$URL for example-url

```
$ git clone $GITHUB/JanHelbling/libmicrohttp.git
$ cd libmicrohttp
$ sudo make install
$ cd ..
$ git clone $GITHUB/JanHelbling/eliamenisch-admincp-finder.git
$ cd eliamenisch-admincp-finder
$ make
```

so, now we run it with 10 threads:

```
$ ./eliamenisch-admincp-finder -t 10 -u $URL
```

In my \$SHELL, it does 415 requests in 15 seconds with 10 threads.

License: GPL3+

cheers

Let me know if you have some suggestions :)

Let me know what you guys think, first time using hack forums, wasn't sure where to make this post (let me know if its in the wrong section).

How to use:

Wait for script to load chrome driver, dont touch anything.

Enter the amount you wish to invest (used for calculations)

Enter pages to scan (I would recommend staying below 50ish, usually I do around 10)

Close all ads or popups on the browser.

Let the script work it's magic :)

I can't post links as I don't have enough posts, my github is (take out spaces):

<https://github.com/pstefa1707>

Your wordlist is too less you should add some more languages to it / add a language checker to then select the best fitting wordlist.

Yeah, that's a good idea!
