Thread: [Most overpowered settings that bypass most anticheats.](#)

VISA - April 25, 2019, 5:44 am

Could someone give me a little template of settings to put into wurst that would be basically the best median of OP in PvP without standard anticheat plugins detecting? Would be appreciated.

ShinyThings - April 25, 2019, 5:57 am

It's minecraft dude.... Everyone is on roblox now... Just hook it up to a 4k monitor and stomp on the kiddies...

foddermc - April 28, 2019, 5:41 pm

Uh, well a slight problem with the circumstances here. You want settings for Wurst (which is mildly overrated and extremely bad at performing basic functions). If I were you, I'd switch to something more credible. IE: fellow HF members, hal and brudin's Huzuni (which is open source and can be found here: <https://github.com/Huzuni>) (The release of the client for 1.10.2 and 1.8.8 is here:

1.10.2: <https://github.com/Huzuni/Huzuni-1.10.2/releases>

1.8.8: <https://github.com/Huzuni/Huzuni-1.8/releases>

Listen, cunt. Wurst may not be the best, but you have to cut the developer some slack for making it open source. Debian is open source, and although some of its packages are terrible, the developers still care and made the software open source.

I'd like to see you make a better open source hack you arrogant, selfish bitch who won't share his fucking code. Your code is probably worst than wurst.

Hey bud, just an fyi, the mass majority of my stuff is open source. Also, if you cared to pay attention to the Wurst repo, you would know that half of the stuff in the production version of the client isn't in the repo.
