Thread: [Does Sentry MBA still work w reddit?](#)

**amp.** - April 30, 2019, 1:13 pm

I used to crack reddit accounts from an ebook here, I still load everything as I would half a year ago, but nothing really happens like no hits. Idk if its my reddit config thats outdated, or what. I would be interested in paying for updated files. my word list, proxies, and ini config seem fine...

Probably an outdated config, and if you are using the same proxies as you did half a year ago those are bad too.

Look up a video on how to make sentry configs. From what I have heard it isn't too difficult

Your better getting hold of the Snipr program there is an excellent config working for Reddit

You can set it up and configure yourself and find a fresh list of proxies to work with
