Thread: [Private And FUD Crypter Source Code!](#)

Fehvah - May 3, 2019, 12:01 pm

NOTE: Before any statements / inquiries are made on my legitimacy, I will get into a one-on-one screenshare with anyone whom is intrigued and display the project as well as it in use for verification!

Project Developed In C#

- Run Key Startup
- Delay Of Execution
- Semi-Private RunPE (Ported From C++)
- Polymorphic Encryption
- Output Obfuscation
- Compression
- Easily ReFUD'able!
- + MORE Features Just Ask!

Screenshots: Shoot Me An Inquiry To See The GUI And Project Screenshots.

Price: Negotiable

I will provide mentoring to the buyer on any questions / inquiries they may have about the project and provide that support even after purchase.

Feel free to PM or reply with your contact for more information

[contract=tid]Start Contract[/contract]

I think its better if you post the GUI,

Delay of execution? what is semi-private RunPE?? and how is it easily refudable?

I will post screenshots very soon today of the GUI and snippets of the source.

Delay Of Execution: Waits X amount of time before injecting

Semi-Private RunPE: Ported the RunPE from one of my C++ sources, heavily modified but still can't be declared as private.

How Easy Is It To ReFUD: Well, this depends on your programming knowledge and understanding of an anti-virus and how they operate. I provide mentoring to the buyer on how to ReFUD but me personally 30m-1h.

Any other questions feel free to ask!

Fehvah - May 12, 2019, 4:45 pm

The project is still currently for sale!

Scantime Scan: <https://spyralscanner.net/imgshr/index.php?id=VK3k4wwUb0> (Result 0/20)

Runtime Scan: Obtaining Resulting Currently!

Fehvah - June 3, 2019, 9:06 pm

This project is once again up for sale!

Fehvah - June 6, 2019, 8:44 pm

Updated and currently ready for a buyer! Feel free to PM with inquiries and contact info!

StarZ - June 6, 2019, 9:40 pm

Provide some better specifics, such as:

CodeDOM or dnlib

Encryption method(s)

Has this been marketed before?

This information will help buyers. Also, post some pics of the classes/modules. No one likes messy code.

1. CodeDom is being used to compile the protected executable.
2. That has already been answered check the main post.
3. No, if it had been then it would not be private.

Feel free to PM, I can showcase the project to you.

I am currently headed to bed, any inquiries will be handled in the morning!

nascoman - September 26, 2019, 5:11 am

Guys, I am looking for private crypter anyone has should let me know and i use Origin this is mine discord id jameslagesse1111#8741
