Nice GUI mate ! I'm joking, i know making form with C/C++ is not very friendly and a nice GUI is not the main priority. I would be very interested to see the videos of bypassing with startup. GLWS ! ?

red - May 9, 2019, 12:54 pm

Yeah, can you show proof of your crypter bypassing all AV on runtime/scantime and the startup option bypassing all AVs?

PrimeLeader - May 9, 2019, 1:55 pm

will add videos this days

Flacon - May 9, 2019, 5:50 pm

i'd do free runtime tests for u i have 300 runtime scans left on my dyncheck if your willing to allow runtime with recmos let me know

SIM-3132187 - May 9, 2019, 6:06 pm

I see that you have added a video with windef without startup, startup is really important because it can cause detections on some AVs.

Vouch for prime protector!

Flacon - May 17, 2019, 9:40 pm

The man gave the file for the test review

The results with Recmos Rat

<https://dyncheck.com/scan/id/05f6a065bc5b60062637cbbe640e48a6>

the man is very cooperative.... KIS lingers as major av

On the dyncheck all seem ok with Windows Deffender in the Real PC the file was killed within 5 seconds i can agree that this is due to Geo targeting and in some cases will bypass the windows deffender yet the conclution is unsettle

Over all the crypter is great and i'd do suggest buying if you are comfortable with the above Results

Best Regards

Flacon

yes, that't trueWatch this entirely, <https://www.youtube.com/watch?v=6v37PAbZ2U0&t>

This video dates back to 2016, the cloud scanner wouldn't be triggered if I zipped it, so I attempted running a plain crypted executable downloaded from the Internet. We're currently in 2019 and I don't know if Avira changed the way they handle sample submission to their cloud for quick analysis...

Their cloud scanner was (or maybe IS still) annoyingly hard to bypass. Its heuristic engine used to detect MOST (if not ALL) crypter outputs, even if the crypted file was some legit executable...

The crypter used for that particular binary was based on NSIS installer, which used to bypass Avira... But not for long.

weird, if my binary was detected by avira it didnt matter if i zip or not, these days i have 0 issues with it, im not using this crypter here from the thread, but i just pump my executable quite a bit and it works just fine because it never gets submitted to the cloud.

the cloud is just a bigger scantime engine and it's not true that it detects all files

its not required to pump the output file if you use our crypter

Well like I said, it USED to be true when I was on the crypting business. 3 years have passed and they may have changed a lot of stuff, maybe it's easier to bypass now.

This guy is a scammer, I bought his private stub + stub for \$150 and the injection fails, so does the startup it does not work and he refuses to refund.

He constantly ask me to show him on teamviewer and to repeatedly show him over and over. I do not have the time to help you fix your broken stub issues and injection methods.

He will not refund the \$150
He will not provide a new stub.

Scammer and a terrible crypter.

I would highly suggest you do not purchase this crypter... RUN, do not walk away from this thread.

He will not refund the \$150
He will not provide a new stub.

Scammer and a terrible crypter.

First of all, nobody told you that you are not going to get a new stub. I asked you to show me the issue on TeamViewer and you refused to because apparently you showed it to the support. You refused to get helped instead and you kept spamming for a refund without even allowing me to check the issue through TeamViewer. We even tested your file on our VMs (Windows 7 x86/x64 and Windows 10 x64) and it worked well as you've seen (including the startup). How am I supposed to fix something that you don't show me? Whenever you have time and you feel like getting helped, feel free to talk to me, so I can check your issue because it's more likely specific to your machine, since it worked flawlessly on 3 other VMs but right now I can't do anything when you refuse to get helped.

Edit:

There are chat logs below.

I can provide screenshots of the chat too if is needed.

Hours? You didn't even let me TeamViewer you. You just received the builder and the stub and instead of letting us help you, you kept spamming us for a refund and that you were not going to let us help us fix it because it was not your job.

The rules for a refund are as following:

- 1) We are investigating your issue and then try to fix it. We can't instantly do that of course, we are not robots, so you should give us some time.
- 2) If it's not going to work, then we send you a new stub.
- 3) If the above situations are not working, then we refund.

The reason we don't send a new stub straightforward is because you might be deceiving us in order to get one more for free.

There are many reasons that can cause an issue: machine architecture, your file, etc. You gave us no information, no time and not even a try to fix it. As you've seen, your encrypted file (the one you sent us) worked on our machines. And like I said, if you stop being an asshole, you can contact us anytime so we can fix your issue. If you refuse, we can't do anything about it.

Isn't that just convenient for you buddy?

You update your TOS after we have a dispute?

Go ahead and buy from this guy if you want to...

Far from "good"

I still would NOT RECOMMEND this product or service, to ANYONE here on HF

Proof for the Startup and for that the crypted file works correctly.

Just to clarify, I tested this stub on several of my bots, and it worked on exactly 0 of them.

It works on your PC too, you see that your file has been connected so much times and you uninstalling the rat file and almost instantly executing it again, so the file works more from perfect, and I showed your startup file in your directory and in dyncheck too, so you cannot tell me that the file is not working. What you want to see more from that? Is that not enough for you?

I've tested it on several bots, and different VM's

the stub does not.

it does not start up, it suspends the task.

it does not function properly.

You sold me damaged goods, you wont refund, you wont fix.

You continue to argue with me stating that I am lying, do you honestly think I would pay you \$150 and sit here and waste my time if it worked.

If you say so, then why when I went on your PC, it worked? Including the startup. Why did it work on my VM too? I even told you to come on my machine and test YOUR file but you refused to do that. What do you want more? And stop with that bulls*** that you tested it wherever because you didn't. If you did, it would've worked because it worked on dyncheck's pictures too and they have 23 VMs (of course not all of them produce it on all pictures, but still you can see it on a few of them). I don't know what's wrong with you and I won't reply to you anymore. And btw, if you want to really check whether a process is suspended or not, download Process Hacker or Process Explorer and not your precious Windows 10 default Task Manager which shows nothing alike. Even if it did suspend it I'm 100% sure that it was a problem specific to your VM e.g. corrupted files in your OS and especially notepad.exe. You won't let us debug it but instead you kept saying shit like "I'm not supposed to help you fix your problems". And for the record, usually only AVs suspend processes but since your WD was disabled, there is no possibility too. Anyway, WD was just fine on my Windows 10 VM with YOUR file and my VM has the latest update.

If someone is wondering what this drama is about just scroll up and check our chat discussion and make your decisions whether you should sell your software to this guy or not.

"that doesn't work"? It works exactly as intended and your stub was just fine. The first time you asked me to check your stub, it was completely undetected and I provided you a test result. You didn't contact me back then which means it was exactly as I told you. We agreed on once you pay the whole amount, I can look at your stub whenever you want for one month. You were trying to avoid that and you wanted to get a shared stub instead. I told you that you have to pay the rest of amount that you had to. Basically you were trying everything just to not pay the rest of the money. Sorry but I hate smart asses. If you want supportive behavior by my side, you should be accurate. If you ever wonder why I never had a such problem with anyone else, you can guess it yourself. In other words, that's not how we agreed on. When you adhere your part of the deal, then I will do on mine. Whenever you change your mind, you can contact me back.
