Thread: [Bypassing android app verification ?](#)

Subhajyoti12 - May 5, 2019, 11:58 am

Hey guys I'm new to android hacking scene. I'm not sure if this is the right section to post this but

Basically i have this app called Neilson Mobile App which gives credits every month for installing and leaving the app on your phone

I wanted to install more than one instance of this app on my non rooted phone using apps like parallel space and other similar apps like app cloner on my phone but it still says that

"This Device is already enrolled "

I have tried changing android ID, Changing IMEI, hiding Bluetooth and Wi-Fi MAC addresses using said app cloner app but Still doesn't seem to work. I wanted to post link and screenshots here but I'm new

What can I do to get it work ?

If you can root it, then maybe change the device identifier in the /system/build.prop

That's about all I can think of off the top of my head.

How are you I am fine thank you google.com

MAHIJANNATH - May 11, 2019, 3:48 am

shopw me how to know hacking

Subhajyoti12 - May 22, 2019, 3:38 pm

I guess it's Will be harder than I thought
