Thread: [need a tool to hide a process on windows 10 64 bit](#)

?Phil? - May 6, 2019, 4:03 am

hi there everyone, i want to ask you all if anyone knows of a program that can hide a process that i choose from task manager on kernel level. i already disabled patchguard on my pc running windows 10 64 bit, and now im searching for a tool to hide a process.
thanks in advance guys ?

AlibabaMarket - May 7, 2019, 10:19 am

why not code the tool to inject itself to a already process ?

Inject it into a process which is already running, they will not see anything suspicious.

If your willing to pay, contact me. I have something :). Works on x64 and x86. no need to disable patchguard for any sketchy kernel modifications lmao. Everything can be done directly without triggering KPP.

If i understood you correctly you need a driver that runs in kernel mode right? That is what i meant before. You do not need to disable PG and modify any system structures to achieve what you want. There are other ways as well lol...
