Thread: [Looking to buy good new printer any suggestions...?\( specific hardware requirements.](#)

**bde63537** - May 7, 2019, 2:02 pm

so yeah... U know I'm looking for something under 400\$ but flexible depending on quality and....

I'm looking for a printer with a good software/something with good security/control/open source so i could control it/ install a custom rom/Linux/....

-u know not something that i'd want to smash my head into

Looking for a printer that will except any ink cartridges ... U know fake one's and....  
oh and one with a software that won't flag half full cartridges as empty... U know that shit.....

Color quality is less important but text should be readable and....

Should be able to store nice amount of paper/.... U know... the clasic...  
Nothing so amazing/ different...

i assume laser printer but maybe something else.... As long as it' not too slow/... can burn the paper  
it'd be fine....

Please recommend and.... a link/brand/...

If you'v got some kind of Amazon affiliated link/.... I'd less then mind and buy with your link... but  
give me a good recommendation please don't just try n sell me a generic printer OK ?

thank you  
Cheapest is ideal
