Thread: [Whats the difference between a regular and spoofed server?](#)

SIM-4223324 - May 9, 2019, 4:44 pm

Hey

This may be a stupid question but I am wondering what the biggest difference between a spoofed and none spoofed server is.

bluehk416 - May 11, 2019, 2:26 am

One can send an attack, the other can't.

Uhh what do you mean ?

Suspect - May 11, 2019, 7:46 am

A spoofed server just spoofs the traffic. aka you can send attacks from that server without it leading back to your server.

DePeep - May 11, 2019, 11:23 pm

Spoofed servers are able to send packets with a spoofed sender IP address. These servers can use DDOS amplification techniques such as NTP amplification which sends a bunch of NTP packets to a list of NTP servers with the victim as the send IP address which will amplify the attack by something like 300x. Normal servers cannot send packets with a spoofed sender IP address.
