Thread: [school wifi dns block](#)

y0ur m0m g4y - May 13, 2019, 9:02 am

Hi,

so my school has a dns block that you cant just change the dns, it just says that your dns adress isnt responding.

VPN's also dont work as far as i have tested, and i tested alot.

so how would you hack this that my computer can play games.

thank you in advance,
YMG

Chingchongjapan - May 18, 2019, 9:46 am

Xvpn will work on phones !

Mad76e. - May 22, 2019, 12:54 pm

Perhaps this belongs to the Beginner hacking area

Lets see if i can get it moved to the correct place

ShinyThings - May 22, 2019, 12:56 pm

VPN or proxy. End of thread. This isn't hard.

Why do kids always want to mess with school systems when they should be focusing on school?

1. Don't be a dick to ppl who offer advice

2. Try a online proxy

laf3r - May 24, 2019, 5:59 am

Can you use vpn or proxy.

Ulysses S Grant™ - May 24, 2019, 10:33 am

I hate to be the one on here to do it but be very careful and meticulous when attempting to do

something on school networks. Changing any settings at all or getting into their administrator accounts they treat it as a huge violation and almost always expel the student which instead they should have a bug bounty type program to promote computer skills in their students.

Wouldn't recommend you hacking school's system.

epic_7000 - May 24, 2019, 9:22 pm

solution: don't play video games at school.

Don_Julio - May 25, 2019, 12:45 pm

Try setting up your own VPN using something like OpenVPN or Algo (uses wireguard at its core) and route the traffic over port 443.

There is no way that port 443 is blocked. Algo will be the easiest to setup, but if you follow the instructions neither are too complicated:

<https://www.digitalocean.com/community/tutorials/how-to-set-up-an-openvpn-server-on-ubuntu-18-04>

<https://github.com/trailofbits/algo>

Why do kids always want to mess with school systems when they should be focusing on school? Because school isn't engaging enough for the aspiring HF member.

RektByFate - May 26, 2019, 5:00 pm

Imo schools should enable a system where if you hack into X person then you get Y reward, or if

you hack into X computer and extract Y document then you get Z reward.

Why not? That would encourage kids to learn lol.....

(okay on second thought maybe inspiring them to get into people would be a bad idea.... perhaps maybe something along the lines of defending an attack to teach how to defend an attack?

There is no way that port 443 is blocked. Algo will be the easiest to setup, but if you follow the instructions neither are too complicated:(I think ill use algo cause I have tried OpenVpn and I dont get it) I have 2 pc's I dont use is it possible to run the server on one of them? Or are there any free or add based servers I can use since I dont really have money rn but maybe would be able to invest some later

yea would love that but sadly my school is invested in language skills and has pretty poor science and technology courses

the highlight of my technology course in my three years on this school has been programming lego mindstorms wich well do again next year cause their books are shit
