Thread: [Coding auto Type injection to any game](#)

n4xiii - May 14, 2019, 10:57 am

Injection In any game using injectors.

Let me know if anyone know about how to create a auto type bot (someone who is experience in coding and they to create any injection file)

TO be more clear

LIKE- FPS game (Crossfire) FROM Z8game

I want to message in Lobby (its hard to keep typing again and again about clan or anything) so if anyone can help me with i will be thanful to you and i am sure i will give you \$5 bucks for creating it for me.

Make a .dll file and also code some injector to inject that dll to the game and it start auto typing a message.

Here is what i am asking for you again explained in different way.

Spamming a text message in Lobby of any game with Injection

Injecting a .dll flie with injector

Once its successfully injected there should a option to spam what message i want to spam in the game ,

Like -

Spamming text

Join my clan name Lords or Add me as friend and i will send you gift

Any experienced coder please Help with it.

and if you need more info about it , please leave a reply and i will explain more about it.

Why not use a free autotyper and play ur game in windowed mode so the hotkey to turn it on/off will stil work?

There are many coders who can easily do it so i asked for the best one which can be injected to the game without any problem and by pass the XTRAP (gaming protector to protect it from hacks)

Oh I understand, well goodluck with your search for a working auto typer!

Matrixking - May 14, 2019, 4:17 pm

\$5 bucks means 5k or just 5\$ for that autotyper?

What would be the messages you'll be sending? wich frequency?

You know you could get banned for using 3rd part programs if the autotyper gets detected ?

be careful in your searches, someone could do it just to infect you even if it works 100%.

If its 5k I may be interested, if it's \$5 have a nice day.

tcsh - May 15, 2019, 1:04 pm

You must be joking with the \$5.

Anyway, no need to inject anything.

A simple auto clicker is needed. Message in a text file on disk to pull it from and maybe use screen coordinates for the clicks. You can automate the hell out of this without injecting and stuff.

Good luck.

? Appreciated ,

I will give a try now , lets see what i get through

Autoclicker ?

Auto Typer may be if i found any working ?

And its not about \$5 (if you can find one working with Crossfire N/A) Offer me your price. ?

Vyxn - May 20, 2019, 4:05 am

I made hacks with Cross Fire, way back 2013 with spammer (to advertise the site).

Let me check my pc after I get back home.

But I am in no way going to accept that \$5 if I get updated it.

Okay that's cool , Check it if its working

And don't worry about \$5 or 10 or 20!! ?

i just offered \$5 because , there might be some gamers who already got that and can just share it for \$5 or they can do it free.

I know it might get banned, I will use it on new account.

5K for a spamming tool lol , you can find it free on someforums like mpgh or can ask anyone to code !!!

Even ViP cheat tools for games don't cost more than \$25 and also have amibots in them
