Thread: [\[FREE\] \[NOVICE\] Rat Help Desk](#)

Fluox - May 14, 2019, 1:14 pm

INTRODUCTION

Hey, so as you can tell by my last threads that I am currently trying to give back to the community, so here is one of the ways I am doing it, if you need help setting up a rat, port forwarding, or maybe just have some questions that you would like answering then here is the place to do so.

WHAT HELP IS OFFERED?

Below you will find a list of all the things that I offer help with, if it's not on there feel free to still ask as I may know the answers!

- Portforwarding Assistance
- RAT Setup Help
- General RAT Knowledge
- Software recommendations

DISCLAIMERS

As you would know if you read the title by no means am I an expert in any way shape or form, I am simply a novice but I am still willing to help everyone to the best of my ability and try my best to offer the best service I can.

Some of what I say may not be 100% correct as a lot of my knowledge comes from looking around and searching rather than a hand on approach however I do know a fair bit from doing RATing myself.

VOUCHES

LordDragon - May 14, 2019, 2:13 pm

Thanks for your your contribution to the HF community.I am still having problems port forwarding with cryptic vpn.Can you help me out?

Fluox - May 14, 2019, 2:17 pm

(May 14, 2019 02:13 PM)LordDragon Wrote: [\[CITE\]](#) Thanks for your your contribution to the HF community.I am still having problems port forwarding with cryptic vpn.Can you help me out?

Before proceeding with the instructions below, make sure you DISABLE your firewall, or the port will keep saying its closed.

After you login to the CrypticVPN website, click on "VPN Control Panel" in the sidebar.

Then go to the "Port Forwarding tab"

You will need your internal VPN IP. Connect to the VPN location you would like to open a port on, then go to command prompt and run 'ipconfig'.

Look for the IP that begins with 10.8.x.x. (IP will vary by location)

Once you open the port, use a website like CanYouSeeMe.org to check if it is open.

Make sure something is listening on the port before checking it on CanYouSeeMe.org, we recommend using the Port Listener tool which can be found in the Downloads section in the Client Area.

<https://www.youtube.com/watch?v=NkK98bEwFhk> -- Video here.

Just looked it up and they had a FAQ page that had a step by step on doing so, also contained the video they added; hope this helps. ?

Don't use cryptic vpn for RAtIng/General hacking. I use it for like 30 clients max.

Fluox - May 14, 2019, 2:44 pm

(May 14, 2019 02:42 PM)Cooooool Wrote: [\[CITE\]](#) Don't use cryptic vpn for RAtIng/General hacking. I use it for like 30 clients max.

Ima guess it logs the incoming and out coming connections? And you can get banned from the VPN for doing anything shady?

duplex - May 14, 2019, 2:45 pm

First of all, thanks for offering a help desk, it means a lot.

Just one question, do you use no-ip for your dynamic IP?

Cooooool - May 14, 2019, 2:47 pm

I actually knew the first owner a bit, and he didn't do shit (As he was the owner a small hacking group). But recently people have been saying not to use cryptic because they are using new VPS's ([censored]) and I don't know how trustworthy [censored] is considering that [censored] states in their policy that they will and do keep logs.

Fluox - May 14, 2019, 2:48 pm

I use DuckDNS, why do you ask?

duplex - May 14, 2019, 2:51 pm

(May 14, 2019 02:48 PM)Fluox Wrote: [\[CITE\]](#) I use DuckDNS, why do you ask?
I asked mainly because this is what I used back in the day, is DuckDNS better?

Fluox - May 14, 2019, 2:51 pm

Ah, that is understandable, only time will tell i guess, haha.

(May 14, 2019 02:51 PM)Duplex Wrote: [\[CITE\]](#) I asked mainly because this is what I used back in the day, is DuckDNS better?

I looked around and it appears that NoIP isn't safe anymore, DuckDNS was recommended to me as a safer alternative but i'm not entirely sure on how safe it is.

Correct, No-IP was back-doored when I was ratting, good, you are good.

I am Noob,I don't have router.

What will I use for port forwarding?

Fluox - May 14, 2019, 3:29 pm

Wait? You don't have a router? How are you connected to the internet?

LordDragon - May 14, 2019, 3:32 pm

(May 14, 2019 03:29 PM)Fluox Wrote: [\[CITE\]](#) Wait? You don't have a router? How are you connected to the internet?
3g wifi,that's the reason I opted for cryptic vpn.

Fluox - May 14, 2019, 3:52 pm

(May 14, 2019 03:32 PM)LordDragon Wrote: [\[CITE\]](#) 3g wifi,that's the reason I opted for cryptic vpn.
Understandable, well what you are looking for would be a VPN that allows you to port forwards as well as one that doesn't log incoming and outgoing connections; maybe ask around or make a thread asking if something like this is around?

Sorry that i have non to recommend.

duplex - May 14, 2019, 3:53 pm

(May 14, 2019 03:32 PM)LordDragon Wrote: [\[CITE\]](#) 3g wifi,that's the reason I opted for cryptic vpn.
May I ask why you use wifi?

Fluox - May 14, 2019, 3:54 pm

(May 14, 2019 03:53 PM)Duplex Wrote: [\[CITE\]](#) May I ask why you use wifi?
Good question...Is there a reason you use 3g and not a router? ?

Cooooool - May 14, 2019, 4:35 pm

(May 14, 2019 03:26 PM)LordDragon Wrote: [\[CITE\]](#) I am Noob,I don't have router.

Thanks very much bro

UbiquitousGaming - May 15, 2019, 9:30 am

Is portmap.io working, if yes, can you show how to set it up correctly?

Cooooool - May 15, 2019, 10:00 am

Don't use your home router for RAtIng. As I said before on the thread use a VPN that keeps no logs and supports port forwarding.

UbiquitousGaming - May 15, 2019, 10:15 am

(May 15, 2019 10:00 AM)Cooooool Wrote: [\[CITE\]](#) Don't use your home router for RAtIng. As I said before on the thread use a VPN that keeps no logs and supports port forwarding.
But for example, if i just want to rat my friend, and he won't even know about that...Is that possible with portmap.io?

Cooooool - May 15, 2019, 10:19 am

If you want to RAT literally one person I think its fine.

Edit: Looks like they keep logs of your incoming connections though

ping010101 - May 15, 2019, 11:53 am

is it better to use a Namecheap or godaddy domains for your ddns ? and also, why can't i hold the clients after the IP is changed, even though that i have created the stub with my domain name and also pointed the ip to my domain ?

UbiquitousGaming - May 16, 2019, 5:40 am

Is there any good tutorial, because portmap.io is not working for me, i did everything correctly, thanks.

Fluox - May 18, 2019, 11:12 am

I would highly recommend you don't port forward from your own router in regards to hacking but if you wish to do so, here is a tutorial video on the setup.

Video: <https://www.youtube.com/watch?v=cV9CtR84wSc>

?

(May 15, 2019 11:53 AM)ping010101 Wrote: [\[CITE\]](#) is it better to use a Namecheap or godaddy domains for your ddns ? and also, why can't i hold the clients after the IP is changed, even though that i have created the stub with my domain name and also pointed the ip to my domain ?

I can't actually help you in regards to which to pick as i have never looked into them or used them but with the issue you are having with the losing of slaves make sure that your stub is FUD and that you have port forwarded the correct ports, if that doesn't work try playing around with the configuration of your stub.

Cooooool - May 22, 2019, 12:19 pm

You have to have a server running with nameservers active and your domain pointing at those nameservers if you don't then it can't work. Contact me on XMPP if you have any further questions:
