Thread: [Mac Banned / UUID Banned \[RSPS\]](#)

corrutediz - May 18, 2019, 12:42 am

I was banned a year ago [MAY 2018] on a RSPS and I took a long break, finally it's MAY 2019 and I'm still MAC Banned, can anyone help me in evading the ban? I've already tried using VPN, TMAC, changing hardware variables using regedit.

Finally creating new guest user evaded the ban, I was possible to login and play but I want to login using my ADMIN user account not able to figure out what the client is detecting in the admin user which it is unable to find in guest user and allows to login.

RSPS name: ROATPK
BUMP, Y'all please help a brother out
