Thread: [\[Searching\] Auto Website Scanner / Exploiter](#)

Sh1tHappens - May 19, 2019, 12:26 pm

Hello,

im searching a tool like XAttacker or Mr. Spy. But the tool should be up-to-date and working fast. My goal is it, to shell as many sites as possible preferly fast and easily to upload a webmailer and sending phising mails.

Thanks in Advance!

Public tools like this will not help you as they are all over saturated, so the chance of you auto-shelling a site are slim to none. Your best bet is to do it manually. Not only will you get better results but you'll learn something new while doing it.

Tbh shelling random websites is quite simple really. I posted a n00b friendly course explaining some of these methods that require no experience to learn. Click on my signature for more information. ?
