Thread: [My thread is bugged - Posts don't show up.](#)

Wick. - May 19, 2019, 1:31 pm

My thread is bugged, i was trying to post a while ago but the post just kept loading so i tried a few other ways.

In that meantime i could still PM or browse perfectly fine.

At the same time "packofmidgets" had the same issue that i had.

And after a minute or two all our posts got posted at once, i could delete the double posts but packofmidgets could not delete them all.

The bug:

I can't post on my thread anymore.

It looks like i posted when i apply the message but i get redirected back to the first page and no reply is posted.

I know that it's my thread specific because i am able to post this thread but can't post on my own thread.

The thread: <https://hackforums.net/showthread.php?tid=5971517>

EDIT: Riyu made a post on my thread, i can see it in the last post indicator and alert system but can't see the actual post in the thread.

DB backup which just slows the site down. I would normally close the site to run it but I wanted to see how well it did with HF open. Wasn't too bad. I think about 3-5 minutes of disruption.
