Thread: [Fern WIFI Cracker Issue](#)

probr - May 19, 2019, 6:58 pm

Im trying to setup Fern on my Kali VM. Kali has detected my USB Wifi stick but whenever I open fern it says "No wireless interface was found".

If someone could help that would be great!

Wireless pentesting on a virtual machine can be tricky , and it has lots of issues , can't tell why exactly , but i'd say it depends on the virtualization software , i think those issues are drivers related , if you wanna do some wireless penetration testing i highly recommend installing the distribution , if you can't , then just set up a live boot pendrive , i hope that helps .
