Services are still working !

Tor Browser - June 4, 2019, 1:20 pm

Services are still working !

Mr. Elite - June 4, 2019, 2:26 pm

Did it not dawn on you that you might want to use a domain name without the word VIRUS in it for a malware hosting service? ?

I mean honestly man, how much more blatantly obvious can you get?

[https //uploadvirus.net/not-a-virus.exe](https://uploadvirus.net/not-a-virus.exe)

Is suspicious AF...

True, but many security products outright block domains and urls that even have that keyword.

Just a real bad choice in a domain name IMO.

If you want to make a malware host use a generic name like myfiles.org or something.

You don't even know what you're talking about.

update: we have reached over 40mb/s download speed.
