Thread: [How to bind any files without file binder software](#)

Tiger6117 - May 28, 2019, 5:41 pm

Hey there ! Recently published tutorial on my site about binding files without exe file binder. I am sharing it here with you guys, if you are interested to get detail you can check out my site or video to get clear tutorial.

To bind any files without binder software (exe binder, exe file binder or any file binder), you only will need one script and other winrar to bind any files. For this blog article (tutorial) I am picking two files. So first thing is that you will need one vbs script. Just open notepad and paste the script in it. Then save it with run.vbs. You can copy the script listed below.

```
+++++
```

```
Set File1 = CreateObject("WScript.Shell")
```

```
File1.Run ("File1.txt")
```

```
Set File2 = CreateObject("WScript.Shell")
```

```
File2.Run ("File2.exe")
```

```
+++++
```

Once you get the script file. Next thing is to make sure the files are in the same folder with the script. So for test purpose I already got file1 and file2. File1 is text file and file2 is just simple c++ coded program. Once we are all set, now the next thing is that you need to edit the vbs file. Just right click and edit. You need to rename the file names with your files which you want to bind. For me its File1.text and File2.exe. You can replace it with your file name. Simple is that and make sure you type it with file extension.

You can bind as much files as you want. All you need is to add the below code to run.vbs file.

```
Set File3 = CreateObject("WScript.Shell")
```

```
File3.Run ("File3.jpg")
```

For 4th file you can add one more. You can bind any file with any other file, text file, picture any possible file that is supported by windows operating system.

Now to bind it all into one binded file you just need select all your files with the script (run.vbs) and

right click it. Then click "Add to archive". You will get a archive window with a lot of options. You just need to check "Create SFX Archive" and select best compression method from the drop down list on the left side labeled as "Compression Method".

Now just go to Comment tab in the top menu bar and paste the comment there. You can get the comment below.

+++++

;The comment below contains SFX script commands

Path=%temp%

Setup=run.vbs

TempMode

Silent=1

Overwrite=1

Update=U

+++++

How to bind any files without file binder software

Last step is optional for icon. If you want to set icon for it then just go to Advance tab and click SFX options. There go to text and icon and select your icon for it. Once you are all done with the process just click ok and apply, it will create your binded file with the selected icon.

Well that's all about the method using which you will be able to bind any files without file binder software. I hope you will find it easy, helpful and clean method. With that all been said. I am logging out.
