Thread: [a VPN with 1 Gbps connection](#)

Idk1234 - May 29, 2019, 7:18 pm

Do you know a vpn with 1 Gbps connection?

i'm limited at 100Mbps with expressvpn (my house connection is 1Gbps)

thank u

Just buy a VPS/Dedicated Server with a 1Gbps port and install OpenVPN. Of course, you're going to be limited to your actual internet speed and minus some latency.

We provide the speed you're looking for as well.

Exodus - May 31, 2019, 12:49 pm

You won't get the full 1 Gbps speeds, if you buy a server with a 1 Gbps connection and setup OpenVPN on it you should expect a 25% -ish drop in speeds.

Could just use a lighter protocol like Wireguard.

Yeah exactly, but it also depends on what you need the VPN for, if you're just using it for privacy and encryption then a simple VPS with OpenVPN would do just fine. Your requirements would just be a large enough dedicated port for what you're looking for.
