Thread: [\[Free\] .onion website and hosting \[0/5 Given\]](#)

debian - June 3, 2019, 2:44 pm

Hello HF!

I am studying security and linux servers and whatnot.

I have a method of hosting .onion hidden services that I believe is pretty bulletproof.

I want to practice my method, so I purchased a bulletproof dedicated server and I am offering free .onion hosting.

Of course you will need to be okay with me owning the privkey of your .onion and having access to the files hosted - if you're okay with this then I can host your .onion website.

Features:

V2 or V3 .onion (V3 is more secure, but longer domain)

Custom V2 .onion 'vanity' prefix up to 7 characters (up to 8 characters if you give me a tip)

Custom V3 .onion 'vanity' prefix up to 5 characters (up to 6 characters if you give me a tip)

Vanguard addon (added security)

SSH/SFTP access to your public_html directory through secure .onion address. Example:

Code torify ssh user@afh74fhw984hf9e85ngnmiw4tnw83f98hef934hwjk4tnushser4.onion

Guaranteed uptime of 99.9% for 365 days

NOTE: No illegal content will be allowed

If you're interested, shoot me a PM
