Thread: [Enabling tabs in full post editor](#)

Nachfolger - June 4, 2019, 6:38 am

What's the feasibility of adding tabs in the MyBB full/quick post editor? I find it particularly annoying when I'm writing code examples, etc. Worst case scenario, I could just throw together a userscript.

Please no spaces v. tabs arguments, it will hurt my soul

Omniscient - June 4, 2019, 12:36 pm

Sorry but we're not going to alter the default editor. MyBB is interested in a new editor.

For those who'd like to read more about the new MyBB editor, and even vote, here's a link to the discussion thread thus far:

Here's to waiting 3 years for MyBB to actually finish 1.9.

Almost no browser textarea forms allow tab because it's an integral part of the browsers function. And to alter the JS to take over tab is probably a bad idea.
