Thread: [Window Logger](#)

lynxmk - June 5, 2019, 12:07 pm

Removed. It was pretty bad tbh.

YouthInAsia - June 5, 2019, 2:16 pm

There are better ways to retrieve the time.

Window could be unicode.

Writing [buffer overflow] when you could have just written partial window title.

Redundant call to memset since stack is cleaned at the end of the scope.

And writing a window title every 500ms seconds which will fill up your file really quickly.

overall trash code, trash design.

lol what kinda code is this

your "title" buffer will never have a "strlen" above the MaxCount argument to begin with...

GetWindowText(hwnd, title, buflen);

I wasn't even paying attention to that ?
