Thread: [what drives a hacker these days?](#)

Mad76e. - June 7, 2019, 3:09 am

Ok, give me your best shot, what drives a hacker these days. Is it money, the thrill or what? I know what drives me, but I'm curious about what's driving you

(truthfully, I need some material to write in my book)

Agent Shark - June 7, 2019, 4:54 am

What drives me to be a security professional is the privilege I was extended to witness cyber security protocols being implemented. From a white hat perspective, watching the security measures taken to protect users is incredible but also sad. It's a shame we can't trust users to be themselves and be smart on the Internet.

From a black hat perspective, witnessing social engineering techniques, spear phishing, and other methods of stealing user data WITHOUT necessarily accessing network systems is incredibly fascinating. From a more intrusive side, watching pentesters utilize their tools (similar to a technician) to inject themselves into the system they are trying to enter is crazy. If you ever get an opportunity to do a hackathon or go to one, I encourage it.

Mr. Robot - June 7, 2019, 5:49 am

Personally a scooter. It's what gets me around.

All jokes aside - Nothing. Thrill is gone - breaking and entering, stalking employees home, finding an exploit in a system -

I guess for some people that feeling never goes but i'm dead inside these days. That's why i'm moving to game development.

incelsubhuman - June 7, 2019, 5:50 am

none of you are hackers give it up

(Jun 7, 2019 04:54 AM)Sh?rk Wrote: [\[CITE\]](#) What drives me to be a security professional is the privilege I was extended to witness cyber security protocols being implemented. wow doxing soundspretty skiddish to me

game dev requires extensive graphics knowledge... if you dont have any you aint a game dev

not basic physics

Dotexe - June 7, 2019, 5:59 am

Why people mistake doxing as hacking ? Woah you will get your name & address exposed, lets keep it on topic. Hacking for money will get you nowhere. I'm personally doing it for the knowledge.

Mr. Robot - June 7, 2019, 6:02 am

Doxing is all part of hacking - it's used to escalate privileges as well as social engineer. Game development doesn't require extensive graphics knowledge.

An example is as stated, following someone home - hacking their home network or breaking in and bugging the house for work priv escalation.

Good luck with your attitude though.

It's like saying people mistake Engines for Cars. They aren't the same thing - plenty of machines have engines. It's just cars have one too.

Practical - June 7, 2019, 6:03 am

Money, fun, more money... maybe it interests them. Nothing wrong with that.

Dotexe - June 7, 2019, 6:06 am

90 % of people are using those public search engines and they paste the info somewhere, i really cannot consider this as hacking. Of course there are people who could gather more info thru SE and so on but I'm talking in general.

Mr. Robot - June 7, 2019, 6:09 am

I'd consider creating a RAT not hacking either or any old virus -

The easier something becomes, the less people consider it hacking.

Dotexe - June 7, 2019, 6:13 am

There is a huge difference between coding a RAT from scratch and using something already done(public search engines like pipi,spokeo and so on). Other is the question why people are copy and pasting functionality taken from github and then selling their "brand new rat". Coding a Rat(without pasting) not only requires years of experience around the programming lang but networking as well.

Mr. Robot - June 7, 2019, 6:17 am

(Jun 7, 2019 06:13 AM)Dotexe Wrote: [\[CITE\]](#) There is a huge difference between coding a RAT from scratch and using something already done(public search engines like pipi,spokeo and so on). Not at all, coding a rat from scratch is fucking easy. It honestly doesn't require years of experience to get a shell on a PC - It's literally a reverse connection. What are you on?

Unless you are trying to say coding your own fucking netcat and mingw which literally there is 0 point.

Every fucking PC by default has the tools on it to initiate a connection - creating a fucking executable jar or even exe to utilize an internet connection to allow for remote communication? That's like the most basic shit.

Here's one of many examples. Fucking telnet -

Ok create a fucking batch file that enables telnet and pings back so you know which public IP has run your file. Convert to exe if you must. Not hard from a batch.

Let them fucking run it. Connect via telnet. Run whatever you fucking want.

Name a single damn rat on HF that has used anything unique. They add other libraries and then 'code' them in so they can click it and run a command on the other end.

Dotexe - June 7, 2019, 6:26 am

(Jun 7, 2019 06:17 AM)Mr. Robot Wrote: [\[CITE\]](#) Not at all, coding a rat from scratch is fucking easy. It honestly doesn't require years of experience to get a shell on a PC - It's literally a reverse connection. What are you on?

Let's keep the nice attitude. If you code something like RAT without prior knowledge in the programming & networking field I could only imagine how poorly written the software could be. So yes coding a software is much more complicated than spending few minutes to hours of searching info regarding x person. Not to mention WebMonitor is also HTTP based, which makes everything more complicated. Every RAT here is clone of something else with different GUI but same

functionality. Cannot say the same for only two(WebMonitor and Orcus).

Strayaa - June 7, 2019, 6:28 am

I see a shit looking site?
I will try break it.

Why?
Shits n giggles

Learning a few commands by heart is a good thing in the beginning BUT is not the right path for long. If you not understand what you're doing when you execute a "command line" and it doesn't work as expected and you're forced to use other ways to get a result, but you cant and freeze, thats a good example between a hacker and pleb, skid (other condescending word) An more trained one will first scratch his head and think what exactly might have happened and then try to modify his command to reach his goal.

heart.break - June 7, 2019, 7:43 am

You ever wonder how the back-end is vulnerable?

Like Try and reverse engineer and imagine the back-end SQL vulnerable statement from just the SQL query you injected on the login field.

I am curious myself too. Since I assume most people just craft their own google dorks and brute force these vulnerable sites with these SQLI login bypass cheat-sheets?

sadb0t - June 7, 2019, 8:36 am

well it depends , if its whitehat or blackhat hacking

i mean who doesnt like to get permissions to hack someone ? (bug bounties)

blackhat hacking would be either money or money

incelsubhuman - June 7, 2019, 11:14 am

(Jun 7, 2019 06:02 AM)Mr. Robot Wrote: [\[CITE\]](#) Doxing is all part of hacking - it's used to escalate privileges as well as social engineer. Game development doesn't require extensive graphics knowledge.

"doxing is part of hacking"

-skids 2019

"escalate privileges" ? ??? ? ?

oh you mean stealing system tokens and assigning them to specific user-mode underprivileged processes???? yeah that requires DOXING

game development does indeed require extensive graphics knowledge. Proprietary game engine developers are "Game developers". Unless you're talking about some small time XNA 2D trash, then you're just clueless

cope if you think doxing is hacking

cope if you think game developers don't need extensive graphics knowledge to be successful: IE blizzard

that's why you see a trend with games that are built upon proprietary game engines versus open-source trash like unrealengine: PUBG, SMITE, all garbage. Fortnite is garbage too.

Meanwhile call of duty, WoW very successful games because of the developers competence, and experience.

IceCr4cKeR - June 7, 2019, 4:46 pm

lost the excitement part of it, right now considering hacktivism

Mr. Robot - June 7, 2019, 4:53 pm

Yup, you literally just showed my point - doxing an employee and using that information to both use social engineering and a physical plant to take on a company is required in most cases. Not everything can be scripted like skids want (aka you)

Then you went on to say some of the most successful games ever were built using an engine are garbage because what? Your opinion?

Game developers 99 times out of 100 aren't the game engine developers. Only in very rare instances do you find that in older games such as WoW where they had to start from scratch.

If WoW was built on an engine made recently- it would be 10x better of a game as far as physics, styles, quality of life and updates.

You're a moron through and through - your name suits you,.

Last note, you're forgetting COD ripped the engine id Tech 3 to use as a base. That's literally using anothers engine to do a job.

incelsubhuman - June 7, 2019, 5:42 pm

LOL. You should re-evaluate what the difference between a "creep" and a "hacker" are...

Game developers 99 times out of 100 aren't the game engine developers. Only in very rare instances do you find that in older games such as WoW where they had to start from scratch.

more conjectures... based on what statistical data? fucking empirical??? not even an educated guess. Have you taken a statistics 101 class ? Keep coping buddy, "herp developers dont need to know extensive graphics to be good game developers, let's just start coding shit in unity and hope people enjoy it bro unity takes care of it all for us bro"

meanwhile we have skids like you computing orthographic projection matrices from 3D to screen space using the CPU... (omg..so many buzzwords what's orthographic projection.. what's perspective projection omg))))))))))

If WoW was built on an engine made recently- it would be 10x better of a game as far as physics, styles, quality of life and updates.

but.. blizzard has an optimal physics transformation; WoW isn't the only game based on blizzard's proprietary engine. Don't forget. We have overwatch, diablo, etc.. All of these successful names. Then we have you, some script kiddie who couldn't code his way out of a ring3 sandbox

fuk bro cant evne escape a ring3 sandbox bro

how do u feel being alive longer than me and you cant even escape sandboxie.exe
[warn]

(Jun 8, 2019 02:35 AM)Strayaa Wrote: [\[CITE\]](#) What do you consider as hacking then

I got some issues with that description. Google assumes that everyone "that gains an unauthorized access to data in a system or computer." is a hacker, and its illegal to do so. But thats exactly what a pentester doing all day long, would you even call a pentester a hacker these days or simply a security researcher (or something similar)

Strayaa - June 8, 2019, 3:55 am

If the word "hacker" was okay to use, why in the world do we see names as "penetration tester", "security researcher" "security specialist" etc. as you said they describe exactly the same thing, or have the word "hacker" a more negative "role" and they want to move away from that word.

Anything with accessing a system unauthorized (with permission from owner) now you're a pentester, and the next day accessing a system unauthorized say at a library and you use the same tools and the same method, and now you're a hacker..

Maybe its just me and age.. whining away at the world

Elitas - June 8, 2019, 5:37 am

(Jun 8, 2019 02:35 AM)Strayaa Wrote: [\[CITE\]](#) What do you consider as hacking then

Sure, but it's not real hacking. You might not be aware of some subcultures of hacking which consists of kids & scripts, but even outside of that there is a clear difference between real web application exploiting and bypassing the admin login of some website nobody cares about.

Mr. Robot - June 8, 2019, 6:00 am

Not at all, if a website is that useless and vulnerable to obvious attack like that (which are usually only honeypots or extremely old Indian sites), then you're not unauthorized, you're very much authorized. Realize that the majority of these sites exist and are designed to be vulnerable to that, to get you to login so they can use that data for threat intelligence. They are authorizing you, lol.

f o r m i d a b l e - June 8, 2019, 10:18 am

My world is business, but from what I see drives hackers is:

Terrorism, activism, and espionage.

MaximumPain - June 8, 2019, 11:14 am

well the first major company i hekked was a security company worth 90 million. The reason I did it at first was honestly idk. I left a deface message asking \$ or else I would leak the DB but never received anything lol. BUT honestly id say money lol.

Strayaa - June 8, 2019, 5:56 pm

Lol this is a dumb argument. Lets just say this; if you use the admin bypass trick on random Indian websites then you're a skid.

AnonymousOperative16 - June 9, 2019, 4:05 am

Hacking/computing was everything to me. Still is. I think obviously people do it for money and the rush. But it's not worth it. People should experience life properly. Not sat in front of a screen all their life. I threw away my teen years for hacking and gaming. It ruined me. People should limit

themselves on technology.

But yeah... it's not worth it is what I'm trying to get across. Why people do it I guess they have their own reasons. My life has always been shit so I became addicted to gaming which lead to hacking. It was like a drug for me. I depended on it.
