Thread: [Fake mail service - spoof sender address ?](#)

equi_gonzales13 - June 9, 2019, 9:15 am

Hello there,

Any ideas of an email service where you may spoof the sender's address? (eg. sending a fake message from "support@randomwebsite.com")

I have tried several (like emkei.cz) however the fake message goes straight to the spam folder or it is not sent at all.

Apart from this, it is essential to support html code.

you can try protonmail.com and .yandexmail.com

Thank you, but is there any chance to change my email address (as a sender), in order for the recipient to receive a message from, for example, "support@facebook.com" and not my yandex or my protomail account ?

I believe that they don't support spoofing the sender's address ..

I believe that they don't support spoofing the sender's address ..

There is an app on mobile that lets you spoof the sender address, works on gmail :P

I've forgotten the name but a quick search on Google Play will get you the app.

Hope this helps

to op there's none that works on the internet. some even infect you with malware just be careful. Agreed. Even I couldn't find any, and I looked high and low.
