Hey all,

Just wanted to help aspiring hacking buds with your marketing efforts, so I'm sharing this great tool that spreads your message over FB, Tw and some pop chat sites. It's really easy to use, you'll see.

Btw, there is no malware or any funny stuff in it. I compiled it to prevent some weirdos selling this as their own (but if they do it somehow, I'll bust them in a couple of mins anyway).

Anyways, here's the link: [DELETED] (no cash for me on this link)
Limited to 50 downloads.

* The 1st one who uploads it on VT, the spreader goes away.

Enjoy!

Sounded like a cool tool i guess i missed the opening mayhem, if your still willing to drop a copy for a someone new to malwr but well educated in social exploits and physical access exploits/rev shell exfil, I'd love to check it, electronic remote means of spreading is a skill I'm putting lots of time into lately

Thank you for letting people know, most people blindly comment and it revives shit like this yeah. The other day i saw a thread from 2011 that was active again its just stupid to revive old shit like that
