Thread: [Just downloaded a google chrome portable, scanned it with virus total after need help](#)

redbullislife - June 12, 2019, 5:28 pm

I downloaded a google chrome portable app, then decided running it in virus total after, and it got a 1/70 as a TROjan, what should I do?

Theres 1 report saying its a trojan, the weird thing is cmd.exe opened up 1-5 minutes after downloading it, what should I do?

Edit: I also scanned with malware bytes and got no detections, on google it says this trojan is common for false positivies, also the site I downloded this file is first 1 you find on the internet

Could be a false positive. Did you download from the trusted source?
