Thread: [\[Question\] Change Nanocore .net framework version?](#)

The Masked Pear - June 14, 2019, 4:40 am

Hello, guys!

So i would like to start using Nanocore.

The problem is that it seems to use an older version of .net framework (2.0 or 3.0) not installed by default on windows 10.

At the execution, windows ask for .net framework installation.

I don't want to use crypter because i've my own "crypting" technique.

So my question is: How to modify the nanocore server (maybe with dnspy?) for change the .net framework version to 4.5.

Thank you !

Best regards.

Dr. Green - June 14, 2019, 4:48 am

Don't use Nanocore. It's monitored.

Thank you of your care. But don't worry, i know what i do.

Do you know how to change the .net framework version of the server?

Dr. Green - June 14, 2019, 6:28 am

I guess it's not just a click. It's rewriting the whole shit.

you can invoke it 2.0 on 4.0

no need to change the assembly .NET version.

no need to change the assembly .NET version.that's true
the problem with nano core is that it's actually a winform so it can't be invoked with a simple entry point

***** Exception Text *****

System.Reflection.TargetInvocationException: Exception has been thrown by the target of an invocation. ---> System.InvalidOperationException: SetCompatibleTextRenderingDefault must be called before the first IWin32Window object is created in the application.

at System.Windows.Forms.Application.SetCompatibleTextRenderingDefault(Boolean defaultValue)

at WindowsFormsApplication1.Program.Main()

=====

there's a solution for this on stackoverflow

<https://stackoverflow.com/questions/40490620/c-sharp-setcompatibletextrenderingdefault-must-be-called-before-the-first>

but I don't think that the cracked nanocore is worth it , the password recovery function is broken
the plugin documentation is still however available on archive org If someone wants to write a new plugin

ps : Hello bro ?

ps : Hello bro ?

Hello bro,

I will not try to get more result with that rat. Thank you anyway for your reply, i hope that we will find something better than that outaded shit...

see you very soon ;)

no need to change the assembly .NET version.

You are right bro, i made a mistake.... thank you again for your contribution, you make a really great work, and i hope you will continue.

Take care, bye ;)
