Thread: [Leaked Database](#)

TheAnonymous1 - June 19, 2019, 3:02 pm

I have been using WeLeakInfo for some login/passwords... A lot of the passwords aren't revealed and only show the hash's...

Is there a more reliable service online to use that would have more revealed passwords than this site?

Also... Any tips of a site of service I could use to crack the hashes quickly?

Any help would be greatly appreciated!

Some DB leaks only contain hashes. It's up to you to crack those hashes if you'd like the passwords.

Most databases store passwords as a hash for security reasons, its rare I'm able to get an unencrypted password from a database.

Try using an online decoder on the hash, usually want to google one but first try to figure out what its encrypted with (like MD5/SHA1 etc).

b10a8db164e0754105b7a99be72e3fe5 <- this mix of numbers and lower case HEX code usually would be MD5 (google MD5 decrypt)

If you paste one of the Hash's to me I'll help you identify but its usually MD5. The decoders do not 100% work all the time it depends on how they have done the encryption.
