Thread: [How to hack joomla website ?](#)

siska2828 - June 21, 2019, 2:15 am

please help me. how to hack joomla website like this?

This is an example link

<https://civil.uniandes.edu.co/Boletin/index.php/component/k2/itemlist/user/38571>

This the picture :

<https://i.ibb.co/ccFRjgC/image.png>

Delete space after https:

OP: I will start by saying that what you are asking is a University Website. Not only your request is highly illegal, but dangerous.

Assuming they are NOT using an upgraded version of joomla, take a look at the plugins. Tools like whatcms & joomscan can help you.

Good luck, i wouldn't touch it

While it's good to share those vuln scanners, I would strongly advise OP against testing any of those on servers he doesn't own.

Jail's waiting..

LOL You're not going to prison for hacking a basic wordpress website. No one cares about WordPress... As long as he uses a VPN, then he's fine. The FBI aren't going to arrest someone for using WPScan against some randy website kek

Anyway, feel free to prove otherwise. Just warning OP here.

Scanning is one thing, doing shit after is another.
