Thread: [Player models stuttering ingame](#)

Jordanx - June 28, 2019, 10:37 am

Hey All,

I have a problem since around 3 weeks now where the player models ingame are stuttering.. So do the grenades.

FPS is fine and I do not have any issues with that.

I already looked up google but didnt find any similar thread or support forum.

Maybe someone of this forum can help me with that?

Tried: Reinstalling CSGO, Setting Launch options, resetting my router (maybe Internet lag), set all graphic options on low..

CheatsHunter - June 28, 2019, 10:54 am

What's your antialiasing settings?

Jordanx - June 28, 2019, 10:58 am

Its also the lowest one, Bilnear or something its called.

int - June 28, 2019, 11:05 am

is this with cheats or without?

Jordanx - June 28, 2019, 11:09 am

I do not have any cheats since 3 years or something.

LORE - June 28, 2019, 11:44 am

Validate your csgo game files always helps me out

Also, some user on reddit fixed his issue by removing the-high option from his launch options

CheatsHunter - June 28, 2019, 12:04 pm

Try to increase a bit your antialiasing level and check if in your graphic card driver settings it get set automatically.

would be way easier to record a video, because then we can replay it and see

Hmm alright.. I also figured out, that on the console I have always around 50ms Ping > Scoreboard 23ms.

Did a speedtest and my ping is fine at 17ms. Dunno this is fucking weird.

Its really hard for me to record a video since the stuttering on the models is pretty small.

do you have an autoexec config? if so, try without

mtepper2 - June 28, 2019, 4:59 pm

What are your PC specs? and have you tried putting -d3d9ex in your launch parameters or whatever it is?

Sounds like something that would happen if you had a skinchanger that kept refreshing the skins. But since you dont cheat...

Anti-virus, WTFast type programs, HDMI is plugged to the motherboard instead of GPU, GPU/CPU are dying, etc.

Anti' - June 29, 2019, 12:12 am

Never heard of this before, can you post a video?

LoStaffFaRidere - June 29, 2019, 4:09 pm

try updating your drivers, worked for me
