Thread: [Installing Brave Browser](#)

Codelll - July 1, 2019, 9:26 am

It is not possible install Brave in a LINUX 32 bits. ...

To this day (May 6, 2019) there is no official way to install Brave in Debian

Then how to install it

null_byte - July 2, 2019, 11:15 am

<https://brave.com/download/>

They offer the 32-bit browser for Linux right on the download page.

What issue are you having, specifically, that is preventing the installation from happening?

archangel.dmitry - July 2, 2019, 3:31 pm

You can install it manually though Brave is not included in Debian repository.

Darth Gexe - July 20, 2019, 3:15 pm

I recently installed brave on debian buster (64 bits), the commands I used were these:

```
Code curl -s
[url=https://##/34j][url=https://##/34k]https://brave-browser-apt-release.s3.brave.com/[url]brave-core.a
sc[url] | sudo apt-key --keyring /etc/apt/trusted.gpg.d/brave-browser-release.gpg add -

echo "deb [url=https://##/34k]https://brave-browser-apt-release.s3.brave.com/[url] buster main" |
sudo tee /etc/apt/sources.list.d/brave-browser-release-buster.list

sudo apt update

sudo apt install brave-browser
I hope it'll do you some good.
```

Tried installing this on my whonix but i could not.

I must be LQ.
