Open and Secure Internet

Open Internet Access was created to bring an open and secure internet to everyone anywhere in the world. By offering free and open source networking solutions we allow people to access information freely and securely on the open internet without censorship. We believe that knowledge is the door to the future and access to the internet is the best key available today.

What We Do

We provide everyone with the ability to access the internet safely and securely without censorship all while retaining completely anonymity.

We do this by providing information around cyber security, the open source software needed to be secure, and the global network infrastructure.

Your ISP might be blocking you from connecting to the VPN. Try the TCP config - this can sometimes bypass

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
