Doctor. - July 1, 2019, 10:26 pm

Alright guys, I'm gonna start off by saying you are so fortunate to have clicked and read this thread. That's how bullish I am on this. This has been kept very hush-hush. It's literally about to explode. This is when you guys can unironically get a 10 bagger aka 10x hopefully in ~30-45 days. It would be very wise to grab yourself a "suicide stack" of 5k, which is roughly 1k usd. Anyways, since I know some of you guys are newbie or lazies and don't know how to DYOR, I'll do it for you. As of now, the only marketplace is IDEX really, but Binance DEX might be listing it soon.

***edit 1/24/21

A lot has changed. Half of the info is relevant. It was acquired by Tomochain (TOMO). Anyways dyor i really dont give a fuk what you do, i just want yall to be richard than me

Co-Innovation with 170 billion dollar company --> SAP

6.6m market cap with 4.1m volume

This is Specifically designed for Industry and Business

Token sale lockup for team was supposed to be 2 years. Instead, they elected to double it to 4 years. They also met up with private and early investors who own millions of the total supply to only be able to withdraw tokens spread out throughout the next year rather than an 80% increase dump in circulating supply.

Interestingly, during Lition's public sale, the company raised \$2,000,000 in under 19 minutes, bringing the total funding to date at \$4,900,000. Sold out an ICO in 2019, when ICO's are dead. They liquidated their proceeds from ICO into EUROS because they need the money to actually develop a serious project instead of gambling on the crypto market

Listen. I'll repeat myself again. This token has a 7 million dollar market cap with 5 million trading volume for the day. Most coins in the top100 don't even have that much volume. This is SMART money accumulating right now. Do you really wanna miss out on 1000%+ because you wanted to buy this for a few pennies cheaper? Buy a 5k suicide stack. That was \$1k a few days ago, now it's \$1.5k. Still cheap. It's getting more and more expensive to do so everyday. It's basically guaranteed to hit \$1. Double digit price if everything goes accordingly.

I'll add in another bread crumb to you guys. Lition has proprietary technology due to the ability to delete data from the blockchain when necessary. This aspect is crucial for businesses and government use since some sensitive customer information MUST be deleted due to privacy reasons. No other cryptocurrency offers this ability. You can read for yourself in the whitepaper image below. Btw, the whitepaper is one of the best i've seen. It's 71 pages for starters and does a Fantastic job highlighting important details.

Interesting.

How does it delete it though? Also anything goes online stays online, not sure how effective it'll be.

Also it defeats the meaning of blockchain, " a blockchain is resistant to modification of the data."

Me too, but this is no ordinary shitcoin my friend. They are already developed. They waited to obtain an official energy license in Germany, build a partnership with SAP, create a collaboration with German Banks, become government friendly with regulations, etc. The list goes on.

Definitely not gonna reveal how many coins I have. All I can say is try to accumulate at least 5 thousand tokens, which is less than 2 grand as of now.

Quite honestly, I have no idea, but I'm not worried. This is the part where skepticism and ignorance causes people to lose money. "Not sure how effective it'll be". The only thing that matters is that nobody else in the crypto market has that type of technology, and companies Must need deleting of data in certain circumstances. "Anything goes online stays online" is true, but with the blockchain I imagine all the information will be hashed/encrypted, meaning the phrase "eoiaie9ia3a" could mean "Hello there" or anything else.

Who cares if it defeats the meaning of blockchain. Look at XRP, they're centralized as hell. Look at Libra (facebook) token, it is nothing like what a true crypto should be. Yet XRP is Rank #3 and worth almost \$20 billion dollars. Libra is also gonna have mass adoption.

Yeah it was going up non-stop for 5 days straight. This is pretty expected. This price is about the same as when I made this thread. As a side note, just understand that this whole crypto market is manipulated like a motherfucker. Especially with low -market cap coins, you want to do the opposite of your instincts when trading since the "market makers" make money from emotional people trading. Just inverse your trading patterns, or just HOLD literally 1 month and see great returns

This is probably the last time you see LIT below .001 ETH price. Screenshot it. I'm calling it

Anyways, they have the CTO of SAP as an advisor, who helped to write a lot of the Technical Whitepaper (not the one I linked above). Their CEO finished a 4 year bachelor program + a 3 year PhD program in Computer Science in like 2 years. The CEO made a site when he was 17, which had 1 million daily visits.

I like of these coins with large and active communitys. Chat rooms are full of moon lambo memes and people are using next month's salaries to buy more. But new coins come every day..

"FULLY DILUTED MARKET CAP
\$46,168,065.26"

As we can see that now tokens on circulation are only small part of total supply. Yes you mentioned about that but .. more and more selling pressure comes in future as tokens will unlock so I would not keep this coin as long-term hold at all. It is moving to BEP2 chain, which is usually sign of PnD coin, IDEX chart will be wasted, but TBH it is good to see that team is trying to pump price with all possible ways. Marketing is indeed most important on cryptos but I have noticed that \$LIT's price is moving because of Idex market-making. Lit already pumped like 5x from bottom..

They also had "Lition Guaranteed Refund program" which means that ICO investors gets 50%

refunded after 6 months if they want to. Nice way to get investors to ICO but doesn't look good to my eyes..

Price can and most likely will move a lot more as Twitter&4chan shillers and youtuber influencers are behind it. But what happens when they move to next coin? This coin had 5x lower price few months ago. SAP partnership is nothing new, it has been since ICO.

I think same happens what happened to LTO! big big dump and shilling stops
Good luck to project, but I would short this "LIT" If it was possible. but It is not!

these LIT&QUANT&CHX<O&VIDT coins have a lot of similars things. Feels like same guys are behind of these coins.

Lmaoooo that's funny as fuck. I mean, it's the same exact market cap as when I posted this thread, so it's not like it's "CRASHED". This is pretty normal. Whenever btc goes up, alts bleed. It's testing support at the .0008100 ETH mark. Maybe a double bottom and it shoots up? Idk it needs good news and a double bottom would be the perfect catalyst

Regardless, this is nothing out of the ordinary. I'd imagine there are tons of weak hands getting shaken out and switching to ETH/btc.

I'm more bullish than ever. Lition energy (one use case/side project) is making 3m revenue this year with projected 7m next year. That alone is a buy signal.

Lol. Looks like lition has been getting raped. Lost much more than btc and most other alts recently.

I forgot where it was, but I was reading about the owners/devs of Lition. The devs have had previous sketchy projects, something about an underwater energy system which was bankrupt and very shady.

You should look a lot more into the team before you throw huge bags of money it. Sure, they have the lock up period, but they also could own many coins which were unaccounted for since the start.

Not gonna lie, I have lost so much money mate hahaha. Oh well, it's a long term hold for me. Not really too fazed by this anyways. I've just been buying more and more and can show you my buy order dates if you don't believe me.

I'm just not convinced it's a failed project. It's only been on the market for 6 months. All the fundamentals are here, and if you look at the daily volume on IDEX, this dump has been under 500 daily ETH volume everyday for the past week. Meanwhile, it had 1-2k ETH buying volume during the pumps. That's a good sign for me, so I'm still accumulating

Let's just say I have 4x my starting stack from when I made this thread. Still incredibly bullish. This is such a fantastic project. I'm not bullshitting you when I say that I'm Dollar-cost-averaging every week. Read up on their recent ama summaries:

Check out and read this info page: <https://info.binance.com/en/currencies/lition>

They got 2 Chinese 1 Korean VC's.

One of the VC's LD Capital previously backed Qtum, NEO, and EOS. All of those achieved 100x on their investment. The Chinese will not let Lition die. This is here to achieve great success.

I missed out on getting rich in crypto in 2016. Hoping this moonshot small cap gem will take me there.

Mainnet launches end of Q3, so within the next 30 days. Yes, people are already using it and saving 20% per year by buying green energy from Lition (only a small aspect of the token) they plan to be the go-to solution for businesses involving blockchain since they're GDPR compliant with data-deletability features.

Check out this article by CoinDesk written before the Lition ICO. They were already successful before they launched an ICO

Yes I realize this coin has lost 75% of its value from when I posted. I was DCA'ing the whole time. Down like \$5k but oh well.

This is just a heads up. 5 cents is the absolute bottom mainly because venture capitalists and early investors have a buyback option of 50% of ico price (ICO = 10 cents per LIT. Right now it's at 5 cents) it would just be unwise not to buy now when all the whales are guaranteed at least 5 cents per LIT from the company itself.
