[IMG]http://i34.[censored].com/bhiueo.jpg[/IMG]

Sales Representative: Luci[D]ream

Hey guys, it's my pleasure to introduce my newest piece of software, The Bypass. Now some of you may know me from my past product, the Hidden Iye Keylogger. I think that I learned a lot from my experience with it, and I'm ready to give it another go, only this time around, I'm done with the Skiddie coding :).

This program has been in heavy Beta Testing for over a week now, and I feel that I, along with my team of elite testers have nailed out just about ever bug imaginable, and I must say I am highly satisfied with the turnout. This program provides some of the cleanest, most stable, and easiest to understand logs of any key-logging software I have ever used. But don't take my word for it, read some of the reviews that were given by the Beta Testers.

drake_51 Wrote:Un-official Review 5/5

==

Quality of GUI: Amazingly noob-friendly, yet looks very professional. Everything is self-explanatory and easy to see. There is even a section where you can report any bugs straight from the keylogger, which is very helpful.

Rate 5/5

Ease of Usage: Very easy, in relation to the GUI, everything is very easy to find thanks to the sidebar. The keylogger also has an AMAZING feature in the self-cryptor which will allow it to stay FUD, which saves the trouble of finding a separate cryptor. The spreading will also be very easy, because it's both scan-time and run-time FUD.

Rate 5/5

Easy of Vaccine : Infected yourself? Not a problem, simply use the built-in vaccine with the keylogger, and it will instantly rid you of the pest. I rate the vaccine 5/5, just because of the fact that I've done every possible situation for it to screw up yet, everytime it detects and deletes the keylogger from the system.

Rate 5/5

What you're paying for: On top of everything I stated earlier, you get all those little things that make the keylogger absolutely flawless, small things like [ALL BUILT-IN]: File Binder, Remote Downloader, Pumper, Mutex [to prevent infecting same person multiple times], Log mouse clicks, P2P Spreader, MSN Spreader, LAN Spreader, USB Spreader. AND MORE!

Rate 5/5

Bottomline : Probably the best keylogger I've seen on this site, amazing for its price aswell. The amount of features this keylogger has seems to be un-ending. I was also a beta tester for this keylogger and can assure, the coder "Classical" has worked his ass off to make this keylogger what it is today, so stop reading and get to spreading !

Rate 5/5

My recommendation: A++ go buy it now!

Legend Wrote:*Intro: I was privileged to have the opportunity to BETA test this wonderful project, before reviewing it I would like to thank and praise Classical, he has created a flawless application which has been a treat to use.

General: As depicted in the images, 'The Bypass' is very user-friendly. For example, if you so happen to be foolish enough to infect yourself, there is a vaccine feature to rid you of the virus. What's more, it has an auto-updater and a detailed change log, saving a deal of time for the user whom would otherwise had to manually update. Of course, not to mention its other wonderful features, to name a few I enjoyed testing; selective spreading (MSN, etc), keyword logging (which I have not seen before), various encryption methods (RC4, Xor, etc) and of course the lengthy array of selectable stealers and antis.

Logs: The logs are clear and simple, it logs to either EMail or FTP (EMail allowing precise searches for specific logs). I opted for the aforementioned EMail setup. I was very surprised to see the length of game-stealing capabilities! I was also lucky enough to get a couple of victims in my testing.

Conclusion: This is an incredible application. I have to say, you're nuts if you don't buy it! Classical told me that over a months work has gone into the production of 'The Bypass', and it is evident in its smooth and flawless actions! Good luck with sales man, you've worked hard for this! Rating: 5/5

Unofficial Review

[IMG][http://i27.\[censored\].com/2551kdu.png](http://i27.[censored].com/2551kdu.png)[IMG]

Now many individuals think Keylogging is all about getting free shit. But whats free shit that will only last for 24 hours? It's about consistency, one of the qualities this keylogger does not lack, Classical

took the time to make sure the logs being sent via email were clean & reliable, he wanted to avoid any potential complaints, I received the privilege of Beta testing this software, I tested everything from Stealers to File Binding etc, and from experience, I have the utmost confidence if you purchase this software you will not be disappointed.

Quality: 5/5

[IMG]http://i30.[censored].com/975usp.png[/IMG]

It is so simple to use a caveman could do it, the GUI isn't perfect, but everything is organized & ready, ensuring your server compiles successfully. Of course there is always room for improvement, I will have to dock you some points, because IMHO, everything would be a lot more noob-friendly if certain settings weren't pre-ticked, as this may confuse certain individuals, causing them to lose track of what they chose, and what was already chosen for them.

Ease: 3.5/5

[IMG]http://i28.[censored].com/2i27fah.png[/IMG]

I'm not going to lie, the GUI could use a lot of work, and IMHO you should make the tabs horizontal, but that suggestion isn't of to much importance at this current time.

Layout: 3/5

[IMG]http://i25.[censored].com/1t39cj.png[/IMG]

No grammatical mistake I have witnessed in your keylogger, but I did notice one in your "Closed Beta" thread. In the future please remember Bellow is the deep roar of an animal, and below is under or lower, you seem to have them a bit confused ? (no offense). Now in terms of the logs, no keys are excluded, I remember you had begun to discuss "GetASyncKey()", and how it could ruin the logs. If one of the individuals you had infected were typing to fast, the logs would be broken because certain keystrokes would not be detected. You had explained you alternative (will not reveal it), which would log all keys without fail, this is evident in the logs.

[IMG]http://i31.[censored].com/1z686c3.png[/IMG]

Without a doubt, it may be the most unique keylogger you will ever find, especially in terms of features, for example a nifty component known as "Specific Keylogging", it plays a role in keeping your logs clean, as well as only logging what you desire. On top of that, it has a built in file binder, crypter, remote downloader etc. Not to mention the vaccine can kill said infection perfectly if you choose to test it on yourself, from what I've seen it doesn't even matter what settings you use, it was programmed to be flawless ?.

Originality: 5/5

[IMG]http://i29.[censored].com/n3oy7b.png[/IMG]

In conclusion if your one of those individuals who are desperately searching for a tool that can ensure your spreading is successful, you have come across the right one. And in terms of the prices, they are fair, mainly because your paying for the quality of the keylogger. At the end of the day it is up to you the buyer, hopefully I have you convinced. And Classical, I wish you the best of luck with your sales, you have my vouch.

Samuell - August 10, 2010, 11:39 am

Little late on the review Nade Jr, but nice job :), I'll be sure to tell Lucid to edit this post when he gets back.

status quo - August 10, 2010, 12:00 pm

Only 3 days work , NOT BAD (:

[IMG]http://i33.[censored].com/15eb8zo.png[/IMG]

Samuell - August 10, 2010, 12:30 pm

Haha, nice job Drake_51, glad it's working for you :).

Samuell - August 10, 2010, 7:21 pm

I need to start to get people to vouch on this thread instead of my other one ;P.

status quo - August 10, 2010, 8:06 pm

(Aug 10, 2010 07:21 PM)Classical Wrote: [\[CITE\]](#) I need to start to get people to vouch on this thread instead of my other one ;P.

Yeah Imfao, everyone is still looking at the one >_<

NewGeek - August 11, 2010, 1:51 am

I am interested in buying this, do you accept MB?

Samuell - August 11, 2010, 10:26 pm

Alright I just want to re-illiterate this.

Do NOT under ANY circumstances upload your server to VirusTotal.

With that being said, I (as the coder) uploaded a 60% unique stub to VirusTotal simply because they are indeed the most updated/best online scanner around and there have been FUD issues lately, here is the result.

(New Stub, will release tomorrow)

[VirusTotal Scan](#)

So please, for the love of god, don't upload it to VT because you think NVT is outdated.

Thanks, and expect a new patch tomorrow.

(Aug 11, 2010 01:51 AM)hackmenow Wrote: [\[CITE\]](#) I am interested in buying this, do you accept MB?

At this point I'm only accepting Paypal.

Samuell - August 12, 2010, 11:01 am

I'm back online MSN, releasing the patch shortly. I really need to get this thread more active, the one in the Secondary market is were it's all at lol.
