Thread: [i386 error? Virtual Box](#)

Ki11Mach - July 4, 2019, 10:46 am

Hello,

I recently installed virtual box and am trying to run a Kali VM. However, I continually receive a i386 error. Has anyone had experience with this error and if so, how did you solve?

All help is appreciated.

All help is appreciated.

PS, I have a 64 bit cpu but the program is only showing 32 bit?

PS, I have a 64 bit cpu but the program is only showing 32 bit?

What's the exact error you're being shown?

Thank you for the reply!

I apologize, I messed up my original post. The exact error message is "This kernal requires an x86-CPU, but only detected an i686 CPU. Unable to boot - please use a kernal appropriate for your CPU".

I did a simple Google search on the exact error and a bunch of YouTube videos popped up. Try something like that or check this video out.

[VirtualBox Error](#)

Regards.

You need to enable Intel VT-x or AMD-V in your BIOS depending on what CPU you have.

Oh believe me, I did the same simple search and none of these actually helped. This is why I took the time to ask on the forum.

Thanks, I will give it a shot.
