Thread: [Discord Raid Toolbox](#)

iamfry - July 7, 2019, 6:35 am

Discord Raid Toolbox is a Python tool for... guess what? Raiding.

It can spam messages with as many accounts as you wish [well it is limited by the number of tokens you have]

It can do things such as sending friend requests, spamming on servers, DMs, group chats; spamming the audit log with ASCII which makes the moderator's client lag/freeze and spam on voice channels and mass mention members.

It can be downloaded straight from Github: github.com/DeadBread76/Raid-Toolbox

I do not own RTB yet I can give anyone a demo if they want. If you need help DM me on dirt#0666 or in case I change my username etc. just leave your nickname and I'll reach out to you.

Imgur Album: imgur.com/a/gi594xL

Note that in the 3rd screenshot I wasn't able to get more screenshots because my Discord completely froze.

How do you acquire the tokens?

iamfry - July 7, 2019, 7:39 am

1) You can create them yourself. I made like 20 accounts in an hour by hand. To get token from an existing account you should open the developer screen with CTRL+SHIFT+I then select the little phone icon on the top of the console to turn on mobile view, go to application tab [if it is not displayed click the ">>" button to see more tabs] select local storage and find the token section.

Tutorial video to get your token www.youtube.com/watch?v=VvCtWDQtz6A

2) You can buy them as a mass. There's a lot of sellers but I don't trust any of them so I can't link any of them.
