Thread: [What happened after Net Seal? Market in need of a new licensing app?](#)

log dot zip - July 8, 2019, 9:27 pm

Hello.

I am quite good when it comes to developing "crack-proof" applications. As bold as that claim may be.

Aeonhack (god bless his soul), sold off Net Seal, and then subsequently got arrested for Nanocore.

What's the current status of licensing applications? Would any .NET developers be interested in integrating a free, good-looking, PayPal & Bitcoin enabled licensing system into their software?

Let me know your thoughts, and if I've completely missed an already existing product.

Thank you so much.

lol - July 8, 2019, 9:30 pm

Wait wait... Aeonhack got arrested? Holy shit, that's massive o.O I didn't even know that.

Damn!

EDIT: Sorry for the off-topic shit.

Yeah. That was a bit of a tragic loss. He should've put his efforts elsewhere. Great guy.

trinityseal is one thats growing at the moment

Dorrance - July 9, 2019, 4:19 am

There is some thing I see people using 961API

Cyber Coder - July 9, 2019, 1:55 pm

[Codevest](#) fully functional with advanced options and so far all crackers that i've worked with failed to crack last version if implemented correctly and is still free at this point

Unlike others who keep logs and are "raid ready", codevest , by default, keeps no personal logs and doesn't shit all over its users privacy, moreover if the project owner doesn't log for 1 month but has logs enabled, all logs will be automatically deleted.

i said GROWING, not good. Codevest is what i used to use.

Authed is also bad

and there was another one by a user here who tried stealing the "net seal" name in his project lol. The user that tried "stealing" netseal was closely affiliated with XenocodeRCE along with Aeonhack.

(Jul 9, 2019 08:59 PM)M0HX Wrote: [\[CITE\]](#) oh I didn't know that. I just remember members bashing him for reusing Net Seal name lol which isn't ideal.

i looked at a lot of it, had similar code to netseal.

Its my belief that some of the code was infact netseals with modifications

but yeah the guy that released it keizer or smth is/was close to them at the time he deved that and had it on github

you better read then

"me and a friend of mine decided to create a new license system ourselves"

"If you are a vb or c# developer selling a product here please send me a pm and or add me on skype"

"Currently the demo project is made in Visual Basic and the c# version is also about 80% done, i will finish the c# version"

idk about you but all of those scream he PART OWNER

I may be wrong but if I remember correctly what I talked with him a long time ago he is only the user.

He came up with few ideas for the licensing system but that's it.

Is not my place to say who the coder is, but what I can say is that the coder of this licensing system is a very smart guy who has another very good product on the market world wide.

Either way I am sure is a great system, but there is another one sold right here on HF which is just as great if not even better because of the extra options it offers.

What's low and min?

Sorry cos I'm in Australia and it's different.

low security vs minimum security

At a minimum he'd be mixed in with non-violent, non-sexual, offenders. Offenses would range from white collar crimes to federal drug charges to immigration crimes. Additionally, long timers who are on the tail end of their sentence will sometimes move to a minimum a few years before release. Everyone is on their best behavior, no one is trying to fuck up their release. Essentially, it's real easy going. A boring as shit summer camp if you will.

Low security is a pretty large step up from minimum. You have violent offenders and you have sexual offenders, and they make up a pretty good majority of the inmates you're in with. You'll have other white collar, drug, immigration criminals who got unfortunate and got sent to a low, but the majority of the people you interact with there are types of criminals you'd generally want to avoid. That's not saying there aren't good people in there, and you still do have a lot of freedoms you wouldn't have in a med/high/max, it's just a much sketchier security level compared to a min, you need to stay on your toes.

Was going to ask a question regarding this ?

Sucks to hear the guy has approx 2 years left on his sentence.

Vyxn - July 11, 2019, 11:00 pm

There's also another licensing system here, made by the maker of a RAT named after a God in Roman mythology.

Just don't know if this is already online or still in development.

Check it out here:
