Looks promising, enjoyed the unique sales poster, refreshing to see! ^^

Just a few things;What's stub coded in?

Is startup/persistence done through the registry key @ CurrentVersion\Run ?

Which features will not work if executed with usermode privileges?

Good luck with sales!

Wow, i never knew TinyManipulator has been one or even the best FUD crypter on HF. I just experienced a Fud result after within few minutes of my purchase. I'm assuring you, once my 6 months license expires, i wont even waste a damn time to renew my license as this crypter gives me fud result which i have never had for a long period of time.

Please continue your good work, i have made TinyManipulator my number 1 crypter at the moment. Thumbs up for you Man.

this crypter is good and the coder is very friendly, but is anyone experiencing issue (file crash after
crypt) with crypting anyother file other than njrat, only njrat doesn't crash anytime i crypt but other file
crash (orcus, immi, quasar)

The coder have tried alot helping fix this issue but is not fixing on my ends despite he created new virtual machine for me to test, still anytime i crypt and test on my pc/virtual machine/bots file still crashes
